Speight, 2016-08-26 It is the continuous reports of unethical behavior in the form of data manipulation cheating plagiarism and other forms of unacceptable behavior that draw attention to the issues of misconduct The causes of misconduct are manifold whether it is the need to advance in a chosen discipline or to compete successfully for and obtain research funding Disappointingly individuals who are oriented to any form of dishonesty are individuals who had previously displayed little or no consideration for the feelings of others and are therefore more interested in themselves at the expense of the students and others recognizing them by any means necessary This ground breaking and honest examination of ethics in the university setting is unabashed in its descriptions of misconduct in the academic world The text is well furnished with numerous citations that point to academic misconduct and the final chapter deals with the means by which misconduct can be mitigated a strong reminder to everyone in the academic community that above board conduct must be part of our overall message of learning and part of the whole point of education in the first place A must have for academics and non academics alike this text is the second in a series of books on ethics by James G Speight and it is useful to anyone in any industry who is interested in ethical behavior and how to navigate the sometimes murky depths of our professional lives     *Making Sense of Learning* Norman Reid, Asma Amanat Ali, 2020-08-25 This textbook brings together findings from global research on teaching and learning with an emphasis on secondary and higher education The book is unique in that the content is selected in an original way and its presentation reflects the most recent research evidence related to understanding The book covers and presents themes that are based tightly on worldwide research evidence scrupulously avoiding opinion or any dependence on the personal experience of the authors The book starts by reflecting on educational research itself The four chapters that follow relate the story of the research that shows how all humans learn and the variations within that framework These chapters offer a tight framework that underpins much of the rest of the text The next four chapters look at the way school

curricula are organised and how the performance of learners can be assessed They summarise the research evidence related to thinking skills and consider the importance of practical teaching This is followed by two chapters that draw from the extensive social psychology research on attitude development as it applies in education and then by two chapters that summarise the research related to major issues of controversy the performativity agenda and the issue of quality One chapter looks at the place of statistics in education The next two chapters look at the evidence that can support or undermine many typical education beliefs or myths and mirages Finally the last chapter brings it all together and looks into the future pointing to some areas where future research is likely to be helpful based on current knowledge *Student Engagement Techniques*

Miguel Laínez-Aguirre, Luis Puigjaner, 2014-11-03 Decision making at the enterprise level often encompass not only production operations and product R D but other strategic functions such as financial planning and marketing With the aim of maximizing growth and a firm's value companies often focus on coordinating these functional components as well as traditional hierarchical decision levels Understanding this interplay can enhance enterprise capabilities of adaptation and response to uncertainties arising from internal processes as well as the external environment This book presents concepts methods tools and solutions based on mathematical programming which provides the quantitative support needed for

integrated decision making and ultimately for improving the allocation of overall corporate resources e.g. materials, cash and personnel. Through a systems perspective, the integrated planning of the supply chain also promotes activities of reuse, reduction and recycling for achieving more sustainable environmental impacts of production distribution networks. Thus, this book presents for the first time a unique integrated vision of the Enterprise Supply Chain Planning and provides a comprehensive account of the state of the art models, methods and tools available to address the above mentioned features of the modern supply chain. It offers a comprehensive review of the associated literature of supply chain management and then systematically builds on this knowledge base to develop the mathematical models representing each of the core functional units and decision levels of the corporation and shows how they can be integrated into a holistic decision problem formulation. Abundant illustrations and tables help maximize reader insights into the problems discussed with several case studies and industry application also examined. This book is intended as a textbook for academics, PhD, MSc researchers and industry decision makers who are involved in the design, retrofit and evaluation of alternative scenarios for the improvement of the supply chain.

A Participatory Paradigm for an Engaged Scholarship in Higher Education Ortrun Zuber-Skerritt, Lesley Wood, Ina Louw, 2015-01-01. This book provides a comprehensive conceptual framework, case studies, workshop processes and designs for academic development programs supported by two key concepts: Participatory Action Learning and Action Research (PALAR), a conceptual integration of action learning and participatory action research and action leadership. PALAR is conceived as a philosophy, a methodology, a theory of learning and knowledge creation and as a facilitation process. Action leadership involves collaboration, action, concern and responsibility for others rather than a position of power and control over them. It is participatory, strategic, ethical and non-hierarchical.
