Each function below is called a polynomial function. Sketch the graph of each. There is the graph provided to the right, explain the similarities and differences among members of families.

1a) Linear (degree 1) functions

1a)  $f(x) = x$

1b)  $f(x) = x^2 - 3x$

1c)  $f(x) = -x^2 + 3x$

Similarities/Differences:

Linear functions always have one x-intercept. Quadratics can have two x-intercepts, one x-intercept, or no x-intercepts. All functions are continuous.

2a) Quadratic (degree 2) functions

2a)  $f(x) = x^2$

2b)  $f(x) = x^2 - 3x$

2c)  $f(x) = -x^2 + 3x$

Similarities/Differences:

Quadratic functions always have two x-intercepts, one x-intercept, or no x-intercepts. All functions are continuous. Quadratics can have a maximum or minimum.

3a) Cubic (degree 3) functions

3a)  $f(x) = x^3$

3b)  $f(x) = x^3 - 3x^2$

3c)  $f(x) = x^3 - 3x^2 + 3x$

Similarities/Differences:

Cubic functions always have three x-intercepts, two x-intercepts, one x-intercept, or no x-intercepts. All functions are continuous. Cubics can have a local maximum or minimum.

4a) Quartic (degree 4) functions

4a)  $f(x) = x^4$

4b)  $f(x) = x^4 - 3x^3$

4c)  $f(x) = x^4 - 3x^3 + 3x^2$

Similarities/Differences:

Quartic functions always have four x-intercepts, three x-intercepts, two x-intercepts, one x-intercept, or no x-intercepts. All functions are continuous. Quartics can have a local maximum or minimum.

### **Teaching and Learning High School**

**Mathematics** Charlene E. Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i.e. teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1.1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans

A Quiet Revolution Michael D. Steele, Craig Huhn, 2018-03-01 Over the past thirty years Holt High School in central Michigan has engaged in a quiet revolution that has transformed mathematics teaching and learning in the district From its

roots as a rural high school housed in a single building in the 1980s the high school mathematics staff has grown an innovative meaningful high school mathematics curriculum that sees nearly every student in the district completing the equivalent of Precalculus Tracking was dropped in favor of an evolving suite of supports designed to promote student success in unifying rather than segregating ways Mathematics classrooms in Holt are discourse rich environments where teachers and students explore meaningful uses for mathematics as they reason and problem solve together This transformation took place and persists amidst changing professional partnerships shifting district demographics increasing accountability measures at the state and national level and turnover in teaching staff and district leadership In this book we explore the case of Holt High School through an exploration of how the mathematics curriculum has shifted over the past thirty years and the conditions and supports that have been put in place in the district to make this work fruitful and sustainable The story includes successes failures celebrations and challenges as we chronicle Holt's high school mathematics evolution Guiding questions protocols and reflective activities are provided for teachers and district leaders to begin the challenging conversations in their own district that lead to meaningful change
