Psychological perspectives on expertise Guillermo Campitelli,Michael H Connors, Merim Bilalić,David Zachary Hambrick,2015-05-19 Experts are persons who are very knowledgeable about or skillful in a particular area The aim of this Research Topic is to advance knowledge in the understanding of the phenomenon of expertise by putting together different lines of research that directly or indirectly study expertise Herbert Simon s expertise studies initiated two lines of research One is interested in elucidating the cognitive processes underlying expertise and the other investigates how expertise develops These lines of research started with studies comparing experts and novices in chess and then they extended to numerous areas of expertise such as music medical diagnosis sports arts and sciences In the field of judgment and decision making researchers investigate the quality of judgments and decisions of experts in different professions e g clinical

psychologists medical practitioners judges meteorologists stock brokers Those lines of research explicitly investigate the topic of expertise but there are other research areas that make a substantial contribution to understanding expertise Scholars in language acquisition and in face perception for example investigate cognitive processes and development of expertise in areas in which almost everyone becomes an expert Furthermore skill acquisition research informs in detail about short term cognitive changes that may be important to understand how expertise develops We are interested in original research that advances knowledge in the understanding of decision making cognitive processes and development of expertise in sports intellectual games arts scientific disciplines and professions as well as expertise in cognitive abilities such as perception memory attention language and imagery We are also interested in theoretical articles in any of these areas articles that describe computational or mathematical models of expertise and articles offering a framework that would guide expertise research Articles that offer integrative approaches of some of the areas described above are strongly encouraged The goal of this Research Topic is to produce a hallmark piece of work in the field of expertise which complements and does not overlap with the Neural implementations of expertise Research Topic in Frontiers in Human Neuroscience

**United States Patent and Trademark Office** ,2005 Epigenetic Therapy with Histone Deacetylase Inhibitors: Implications for Cancer Treatment Christiane Pienna Soares,Jean Leandro Dos Santos,Ângela Sousa,2021-06-02 Systems Biology of Transcription Regulation Ekaterina Shelest,Edgar Wingender,Joerg Linde,2016-09-09 Transcription regulation is a complex process that can be considered and investigated from different perspectives Traditionally and due to technical reasons including the evolution of our understanding of the underlying processes the main focus of the research was made on the regulation of expression through transcription factors TFs the proteins directly binding to DNA On the other hand intensive research is going on in the field of chromatin structure remodeling and its involvement in the regulation Whatever direction we select we can speak about several levels of regulation For instance concentrating on TFs we should consider multiple regulatory layers starting with signaling pathways and ending up with the TF binding sites in the promoters and other regulatory regions However it is obvious that the TF regulation also including the upstream processes represents a modest portion of all processes leading to gene expression For more comprehensive description of the gene regulation we need a systematic and holistic view which brings us to the importance of systems biology approaches Advances in methodology especially in high throughput methods result in an ever growing mass of data which in many cases is still waiting for appropriate consideration Moreover the accumulation of data is going faster than the development of algorithms for their systematic evaluation Data and methods integration is indispensable for the acquiring a systematic as well as a systemic view In addition to the huge amount of molecular or genetic components of a biological system the even larger number of their interactions constitutes the enormous complexity of processes occurring in a living cell organ organism In systems biology these interactions are represented by networks Transcriptional or more generally gene regulatory networks are being generated from experimental ChIPseq data by reverse engineering from transcriptomics data or from

computational predictions of transcription factor TF target gene relations While transcriptional networks are now available for many biological systems mathematical models to simulate their dynamic behavior have been successfully developed for metabolic and to some extent for signaling networks but relatively rarely for gene regulatory networks Systems biology approaches provide new perspectives that raise new questions Some of them address methodological problems others arise from the newly obtained understanding of the data These open questions and problems are also a subject of this Research Topic

**Topic** *The Evolution of Rhythm Cognition: Timing in Music and Speech* Andrea Ravignani, Henkjan Honing, Sonja A. Kotz, 2018-07-24 Human speech and music share a number of similarities and differences One of the closest similarities is their temporal nature as both i develop over time ii form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii generate metrical expectations Human brains are particularly efficient in perceiving producing and processing fine rhythmic information in music and speech However a number of critical questions remain to be answered Where does this human sensitivity for rhythm arise How did rhythm cognition develop in human evolution How did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior
