Biology Kenneth Raymond Miller, Prentice Hall (School Division), 1999-02 **An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology** Stanton Braude, Bobbi S. Low, 2010-01-04 An innovative introduction to ecology and evolution This unique textbook introduces undergraduate students to quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation It explores the core concepts shared by these related fields using tools and practical skills such as experimental design generating phylogenies basic statistical inference and persuasive grant writing And contributors use examples from their own cutting edge research providing diverse views to engage students and broaden their understanding This is the only textbook on the subject featuring a collaborative active learning approach that emphasizes hands on learning Every chapter has exercises that enable students to work directly with the material at their own pace and in small groups Each problem includes data presented in a rich array of formats which students use to answer questions that illustrate patterns principles and methods Topics range from Hardy Weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity The book also includes a comprehensive glossary In addition to the editors the contributors are James Beck Cawas Behram Engineer John Gaskin Luke Harmon Jon Hess Jason Kolbe Kenneth H Kozak Robert J Robertson Emily Silverman Beth Sparks Jackson and Anton Weisstein Provides experience with hypothesis testing experimental design and scientific reasoning Covers core quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation Turns discussion sections into thinking labs Professors A supplementary Instructor s Manual is available for this book It is restricted to teachers using the text in courses For information on how to obtain a copy refer to http://press.princeton.edu/class_use/solutions.html **The Evaluation of Music Teaching and Learning** Richard Colwell, 1970 *Computational Psychometrics: New Methodologies for a New Generation of Digital Learning and Assessment* Alina A. von Davier, Robert J. Mislevy, Jiangang Hao, 2022-01-01 This book defines and describes a new discipline named computational psychometrics from the perspective of new methodologies for handling complex data from digital learning and assessment The editors and the contributing authors discuss how new technology drastically increases the possibilities for the design and administration of learning and assessment systems and how doing so significantly increases the variety velocity and volume of the resulting data Then they introduce methods and strategies to address the new challenges ranging from evidence identification and data modeling to the assessment and prediction of learners performance in complex settings as in collaborative tasks game simulation based tasks and multimodal learning and assessment tasks Computational psychometrics has thus been defined as a blend of theory based psychometrics and data driven approaches from machine learning artificial intelligence and data science All these together provide a better methodological framework for analysing complex data from digital learning and assessments The term computational has been widely adopted by many other areas as with computational statistics computational linguistics

and computational economics In those contexts computational has a meaning similar to the one proposed in this book a data driven and algorithm focused perspective on foundations and theoretical approaches established previously now extended and when necessary reconceived This interdisciplinarity is already a proven success in many disciplines from personalized medicine that uses computational statistics to personalized learning that uses well computational psychometrics We expect that this volume will be of interest not just within but beyond the psychometric community In this volume experts in psychometrics machine learning artificial intelligence data science and natural language processing illustrate their work showing how the interdisciplinary expertise of each researcher blends into a coherent methodological framework to deal with complex data from complex virtual interfaces In the chapters focusing on methodologies the authors use real data examples to demonstrate how to implement the new methods in practice The corresponding programming codes in R and Python have been included as snippets in the book and are also available in fuller form in the GitHub code repository that accompanies the book

Electronic Performance Support Paul van Schaik, 2016-04-29 Despite ubiquitous powerful technologies such as networked computers global positioning systems and cell phones human failures in decision making and performance continue to have disastrous consequences Electronic Performance Support Using Digital Technology to Enhance Human Ability reminds everyone involved in education training human performance engineering and related fields of the enormous importance of this area

Ironically the more complex technology becomes the more performance support may be needed and that's why the extraordinary expertise shared in this book is especially valuable. The authors emphasize the psychological aspects of performance support, the fundamental limitations of human memory, perception, cognition, conation, and psychomotor skills, and how they can be reduced through electronic performance support as one of the most important pursuits of this century. Readers will find the material presented extremely useful because of its generic basis, which underlines much of the contemporary use of electronic technology for supporting people who are engaged in problem-solving activities. At the same time, the book gives examples of the application of electronic performance support in a number of specific domains. Possible future developments for electronic performance support are also discussed. The technological challenges we face today, both globally and locally, are more urgent than most people seem willing to acknowledge, and there is no time to waste putting the ideas expressed in this book into action.

273 technical questions and answers for job interview Offshore Oil & Gas Platforms PETROGAV INTERNATIONAL, This book offers you a brief but very involved look into the operations in the exploitation of Oil Gas wells that will help you to be prepared for job interview at oil gas companies. From start to finish you'll see a general prognosis of the production process. If you are new to the oil gas industry you'll enjoy having a leg up with the knowledge of these processes. If you are a seasoned oil gas person you'll enjoy reading what you may or may not know in these pages. This course provides a non-technical overview of the phases, operations, and terminology used on offshore production platforms. It is intended also for non-drilling personnel who work in the offshore drilling, exploration, and production industry. This includes marine and logistics personnel, accounting, administrative, and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations with a particular focus on the unique aspects of offshore operations.

Paleoclimatology Colin P.

Summerhayes, 2020-09-08 Life on our planet depends upon having a climate that changes within narrow limits not too hot for the oceans to boil away nor too cold for the planet to freeze over Over the past billion years Earth's average temperature has stayed close to 14–15 °C oscillating between warm greenhouse states and cold icehouse states We live with variation but a variation with limits Paleoclimatology is the science of understanding and explaining those variations those limits and the forces that control them Without that understanding we will not be able to foresee future change accurately as our population grows Our impact on the planet is now equal to a geological force such that many geologists now see us as living in a new geological era the Anthropocene Paleoclimatology describes Earth's passage through the greenhouse and icehouse worlds of the past 800 million years including the glaciations of Snowball Earth in a world that was then free of land plants It describes the operation of the Earth's thermostat which keeps the planet fit for life and its control by interactions between greenhouse gases land plants chemical weathering continental motions volcanic activity orbital change and solar variability It explains how we arrived at our current understanding of the climate system by reviewing the contributions of scientists since the mid 1700s showing how their ideas were modified as science progressed And it includes reflections based on the author's involvement in palaeoclimatic research The book will transform debate and set the agenda for the next generation of thought about future climate change It will be an invaluable course reference for undergraduate and postgraduate students in geology climatology oceanography and the history of science A real tour de force An outstanding summary not only of the science and what needs to be done but also the challenges that are a consequence of psychological and cultural baggage that threatens not only the survival of our own species but the many others we are eliminating as well Peter Barrett Emeritus Professor of Geology Antarctic Research Centre Victoria University of Wellington New Zealand What a remarkable and wonderful synthesis it will be a wonderful source of paleoclimate information and insights Christopher R Scotese Professor Department of Earth and Planetary Sciences Northwestern University Evanston IL USA
