Chapter 12: Biotechnology and its Applications Exercise Solutions

Exercise 1: Solutions of Questions on Page Number : 215

Q1 :

Crystals of Bt toxin produced by some bacteria do not kill the bacteria themselves because -

- (a) bacteria are resistant to the toxin
- (b) toxin is immature:
- (c) toxin is inactive:
- (d) bacteria encloses toxin in a special sac.

Answer :

toxin is inactive:

In bacteria, the toxin is present in an inactive form, called protoxin, which gets converted into active form when it enters the body of an insect.

Q2 :

What are transgenic bacteria? Illustrate using any one example.

Answer :

Transgenic bacteria contain foreign gene that is intentionally introduced into its genome. They are manipulated to express the desirable gene for the production of various commercially important products.

An example of transgenic bacteria is *E.coli*. In the plasmid of *E.coli*, the two DNA sequences corresponding to A and B chain of human insulin are inserted, so as to produce the respective human insulin chains. Hence, after the insertion of insulin gene into the bacterium, it becomes transgenic and starts producing chains of human insulin. Later on, these chains are extracted from *E.coli* and combined to form human insulin.

Physiological Psychology Timothy K. Smock, 1999 Examining changes in the field this work emphasizes neuroscience orientation Humanities themes and examples are used to illuminate complex topics and natural science concepts are taught throughout Environmental Science Daniel D. Chiras, 2006 Completely updated the seventh edition of Environmental Science enlightens students on the fundamental causes of the current environmental crisis and offers ideas on how we as a global community can create a sustainable future **Magill's Survey of Science: A-Central and peripheral nervous system functions** Frank Northen Magill, 1991 *When Teaching Becomes Learning* Eric Sotto, 2007-05-15 Intended to help anyone who teaches this book has something of a cult following Drawing on extensive teaching experience the author presents a personal account of good practice written in an engaging and accessible style and based on extensive scholarly sources Part I Learning and Part II Teaching complement one another and the book as a whole offers an insight into how to teach in any set of circumstances It does so without being prescriptive instead helping teachers to think through their own problems and situations As a result *When Teaching Becomes Learning* is a book to which teachers will return on countless occasions This edition has been updated throughout and now has 2 new chapters Reflections of Educational Technology and Why Teach Chapters are now also divided up so they are each shorter and more user friendly than before **The Science of Photobiology** K. C. Smith, 2013-11-11 Although there are several excellent books covering a few of the specialized areas of photobiology at the present time there is no book that covers all areas of the science of photobiology This book attempts to fill this void The science of photobiology is currently divided into 14 subspecialty areas by the American Society for Photobiology The first 14 chapters of this book deal with those subspecialty areas each written by a leader in the field Chapter 15 entitled New Topics in Photobiology highlights areas of research that may be designated subspecialties of photobiology in the future This book has been written as a textbook to introduce the science of photobiology to advanced undergraduate and graduate students The chapters are written to provide a broad overview of each topic They are designed to contain the amount of information that might be presented in a one to two hour general lecture The references are not meant to be exhaustive but key references are included to give students an entry into the literature Frequently a more recent reference that reviews the literature will be cited rather than the first paper by the author making the original discovery Whenever practical a classroom demonstration or simple laboratory exercise has been provided to exemplify one or more major points in a chapter **Books in Print Supplement**, 2002 Cell Biology Robert D. Dyson, 1974

Resources in Education, 1986 *How Can Physics Underlie the Mind?* George Ellis, 2016-05-31 Physics underlies all complexity including our own existence how is this possible How can our own lives emerge from interactions of electrons protons and neutrons This book considers the interaction of physical and non physical causation in complex systems such as living beings and in particular in the human brain relating this to the emergence of higher levels of complexity with real

causal powers In particular it explores the idea of top down causation which is the key effect allowing the emergence of true complexity and also enables the causal efficacy of non physical entities including the value of money social conventions and ethical choices
