Carpenter,Timothy D. Comar,2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see *Biology* Timothy Metz,1999 Maintains a unique balance of emphasizing concepts without sacrificing scientific accuracy Provides illustrations process art and photographs to help readers visualize complex biological processes and to show clearly how the various stages of a dynamic process in biology unfold **Resources in Education** ,1972 The Study of Biology Jeffrey J.
