Interactions between Group Theory, Symmetry and Cryptology María Isabel González Vasco, 2020-04-22 Cryptography lies at the heart of most technologies deployed today for secure communications At the same time mathematics lies at the heart of cryptography as cryptographic constructions are based on algebraic scenarios ruled by group or number theoretical laws Understanding the involved algebraic structures is thus essential to design robust cryptographic schemes This Special

Issue is concerned with the interplay between group theory symmetry and cryptography The book highlights four exciting areas of research in which these fields intertwine post quantum cryptography coding theory computational group theory and symmetric cryptography The articles presented demonstrate the relevance of rigorously analyzing the computational hardness of the mathematical problems used as a base for cryptographic constructions For instance decoding problems related to algebraic codes and rewriting problems in non abelian groups are explored with cryptographic applications in mind New results on the algebraic properties or symmetric cryptographic tools are also presented moving ahead in the understanding of their security properties In addition post quantum constructions for digital signatures and key exchange are explored in this Special Issue exemplifying how and how not group theory may be used for developing robust cryptographic tools to withstand quantum attacks

**Statistical Digital Signal Processing and Modeling** Monson H. Hayes,1996-04-19 This new text responds to the dramatic growth in digital signal processing DSP over the past decade and is the product of many years of teaching an advanced DSP course at Georgia Tech While the focal point of the text is signal modeling it integrates and explores the relationships of signal modeling to the important problems of optimal filtering spectrum estimation and adaptive filtering Coverage is equally divided between the theory and philosophy of statistical signal processing and the algorithms that are used to solve related problems The text reflects the author s philosophy that a deep understanding of signal processing is accomplished best through working problems For this reason the book is loaded with worked examples homework problems and MATLAB computer exercises While the examples serve to illustrate the ideas developed in the book the problems seek to motivate and challenge the student and the computer exercises allow the student to experiment with signal processing algorithms on complex signals Professor Hayes is recognized as a leader in the signal processing community particularly for his work in signal reconstruction and image processing This text is suitable for senior graduate level courses in advanced DSP or digital filtering found in Electrical Engineering Departments Prerequisites include basic courses in DSP and probability theory
