## **Chapter 1:2**

### **Determination of Tax**

#### **Discussion Questions**

**1:2-1 a.** Gross income is income from taxable sources. Form 1040 combines the results of computations made on several separate schedules. For example, income from a proprietorship is reported on Schedule C where gross income from the business is reduced by related expenses. Only the net income or loss computed on Schedule C is carried to Form 1040. This is procedurally convenient but means gross income is not shown on Form 1040.

**b.** Gross income is relevant to certain tax determinations. For example, whether a person is required to file a tax return is based on the amount of the individual's gross income. As the amount does not necessarily appear on any tax return, it may be necessary to separately make the computation in order to determine whether a dependency exemption is available.

pp. 1:2-2 through 1:2-5.

**1:2-2** The term "income" includes all income from whatever source derived based either on principles of economics or accounting. Gross income refers only to income from taxable sources. p. 1:2-3.

**1:2-3 a.** A deduction is an amount that is subtracted from income, while a credit is an amount that is subtracted from the tax itself.

**b.** In general, a \$10 credit is worth more than a \$10 deduction because the credit results in a direct dollar for dollar tax savings. The savings from a deduction depends on the tax bracket that applies to the taxpayer.

**c.** If a refundable credit exceeds the taxpayer's tax liability, the taxpayer will receive a refund equal to the excess. In the case of nonrefundable credits the taxpayer will not receive a refund, but may be entitled to a carryover or carryback. pp. 1:2-4 through 1:2-6.
