The Research Process in Sport, Exercise and Health Rich Neil, Sheldon Hanton, Scott Fleming, Kylie Wilson, 2013-12-04 What are the challenges and potential pitfalls of real research What decision making process is followed by successful researchers The Research Process in Sport Exercise and Health fills an important gap in the research methods literature Conventional research methods textbooks focus on theory and descriptions of hypothetical techniques while the peer reviewed research literature is mainly concerned with discussion of data and the significance of results In this book a team of successful researchers from across the full range of sub disciplines in sport exercise and health discuss real pieces of research describing the processes they went through the decisions that they made the problems they encountered and the things they would have done differently As a result the book goes further than any other in bringing the research process to life helping students identify potential issues and problems with their own research right at the beginning of the process The book covers the whole span of the research process including identifying the research problem justifying the research question choosing an appropriate method data collection

Computational Formulations to Bio-inspired Technologies Massimo Sartori, Francisco J. Valero-Cuevas, Alfred C. Schouten, Matthew Tresch, Yoshihiko Nakamura, Manish Sreenivasa, 2019-08-15 The term neuromechanics defines an integrative approach that combines the neuromuscular control and the biomechanical aspects of physical behavior in humans and animals. Crucial to this approach is a detailed description and modeling of the interaction between the nervous system and the controlled biomechanical plant. Only then do we have the broader context within which to understand evolution, movement mechanics, neural control, energetics, disability, and rehabilitation. In addition to enabling new basic science directions, understanding the interrelations between movement, neural, and mechanical function should also be leveraged for the development of personalized wearable technologies to augment or restore the motor capabilities of healthy or impaired individuals. Similarly, this understanding will empower us to revisit current approaches to the design and control of robotic and humanoid systems to produce truly versatile human-like physical behavior and adaptation in real-world environments. This research topic is therefore poised at an opportune moment to promote understanding of apparently disparate topics into a coherent focus.

Biomechanical Performance and Relevant Mechanism of Physical Medicine and Rehabilitation for Neuromusculoskeletal Disorders Qipeng Song, Li Li, Pui Wah Kong, Lin Wang, Feng Wei, 2023-11-23 Biomechanical performance is a key to evaluating effectiveness in physical medicine and rehabilitation for neuromusculoskeletal disorders. Assessments can be applied to degenerative dysfunction, e.g., falls or knee osteoarthritis in older adults and sports-related injuries, e.g., ankle sprain or anterior cruciate ligament injury. Patients' body movements and daily activity functions can be compared to the state of pre-injury condition or to the level of healthy individuals. Some cutting-edge studies have gone a step further and used biomechanical performance to develop physical medicine and rehabilitation approaches and explore the mechanisms behind their effectiveness. However, such studies are still relatively rare. This research topic is intended to encourage more relevant projects to be published. This research topic aims to encourage researchers to use biomechanical performance to design advanced physical medicine and rehabilitation approaches, evaluate the effectiveness of the rehabilitation approaches, and explore the mechanisms by which rehabilitation approaches work for neuromusculoskeletal disorders. Some studies have developed stretching approaches for the rehabilitation of knee osteoarthritis in older adults by measuring biomechanical performance during functional activities. Some studies indicated that the mechanism of physical activity to reduce falls in older adults lies in its effectiveness in increasing proprioceptive sensitivity and further indicated that rehabilitation of proprioception may be a key to reducing falls in the fall-prone older adult population. Some other studies analyzed biomechanical performance in ankle ligament injuries to understand when, how, and why ligaments fail. As a result, this research topic will expand the application of biomechanical performance to better understand and treat neuromusculoskeletal disorders.

Mechanobiology J. F. Stoltz, 2004 *Mechanobiology* is now a vigorous branch of biomechanics and biorheology which is mainly concerned with the study of the influence of mechanical forces on cells and tissues and their clinical or therapeutical applications As we are now at the age of proteomics and genomics and of cell micromechanical approaches using methods like laser tweezers or confocal microscopy mechanobiology brings new challenges With these new researches mechanobiology is the promise of new diagnostic and therapeutic approaches To the system under scrutiny and that stresses are implicated in tissue physiology for example by the production of the extracellular

matrix secretions i.e production of NO and prostaglandins by endothelial cells or for the induction of specific functions via intercellular communication hence the interest from pharmacology in studies on new molecules Moreover these new findings have led to the development of tissue engineering which is the concept of substitute tissue developed in vitro from bioresorbable or non bioresorbable scaffolds and from cells harvested in a physiologic mechanical environment such as from cartilage bone and vessels At the same time the problem of cell grafting in tissue repair and especially the use of stem cells have led to new therapeutic fields
