The Answer Machine Susan Feldman, 2012 Provides a practical non technical guide to the technologies behind information seeking and analysis The book introduces effective online environments describes how search evolved from an expert only to an end user tool and provides an overview of search engines categorization and clustering natural language processing content analytics and visualization technologies

Mobile Search Behaviors Dan Wu, Shaobo H. Liang, 2022-05-31 With the rapid development of mobile Internet and smart personal devices in recent years mobile search has gradually emerged as a key method with which users seek online information In addition cross device search also has been regarded recently as an important research topic As more mobile applications APPs integrate search functions a user s mobile search behavior on different APPs becomes more significant This book provides a systematic review of current mobile search analysis and studies user mobile search behavior from several perspectives including mobile search context APP usage and different devices Two different user experiments to collect user behavior data were conducted Then through the data from user mobile phone usage logs in natural settings we analyze the mobile search strategies employed and offer a context based mobile search task collection which then can be used to evaluate the mobile search engine In addition we combine mobile search with APP usage to give more in depth analysis such as APP transition in mobile search and follow up actions triggered by mobile search The study combining the mobile search with APP usage can contribute to the interaction design of APPs such as the search recommendation and APP

recommendation Addressing the phenomenon of users owning more smart devices today than ever before we focus on user cross device search behavior We model the information preparation behavior and information resumption behavior in cross device search and evaluate the search performance in cross device search Research on mobile search behaviors across different devices can help to understand online user information behavior comprehensively and help users resume their search tasks on different devices Scalability Challenges in Web Search Engines B. Barla Cambazoglu,Ricardo

Baeza-Yates,2022-06-01 In this book we aim to provide a fairly comprehensive overview of the scalability and efficiency challenges in large scale web search engines More specifically we cover the issues involved in the design of three separate systems that are commonly available in every web scale search engine web crawling indexing and query processing systems We present the performance challenges encountered in these systems and review a wide range of design alternatives employed as solution to these challenges specifically focusing on algorithmic and architectural optimizations We discuss the available optimizations at different computational granularities ranging from a single computer node to a collection of data centers We provide some hints to both the practitioners and theoreticians involved in the field about the way large scale web search engines operate and the adopted design choices Moreover we survey the efficiency literature providing pointers to a large number of relatively important research papers Finally we discuss some open research problems in the context of search engine efficiency *Task Intelligence for Search and Recommendation* Chirag Shah,Ryen W. White,2022-06-01

While great strides have been made in the field of search and recommendation there are still challenges and opportunities to address information access issues that involve solving tasks and accomplishing goals for a wide variety of users Specifically we lack intelligent systems that can detect not only the request an individual is making what but also understand and utilize the intention why and strategies how while providing information and enabling task completion Many scholars in the fields of information retrieval recommender systems productivity especially in task management and time management and artificial intelligence have recognized the importance of extracting and understanding people s tasks and the intentions behind performing those tasks in order to serve them better However we are still struggling to support them in task completion e g in search and assistance and it has been challenging to move beyond single query or single turn interactions The proliferation of intelligent agents has unlocked new modalities for interacting with information but these agents will need to be able to work understanding current and future contexts and assist users at task level This book will focus on task intelligence in the context of search and recommendation Chapter 1 introduces readers to the issues of detecting understanding and using task and task related information in an information episode with or without active searching This is followed by presenting several prominent ideas and frameworks about how tasks are conceptualized and represented in Chapter 2 In Chapter 3 the narrative moves to showing how task type relates to user behaviors and search intentions A task can be explicitly expressed in some cases such as in a to do application but often it is unexpressed Chapter 4 covers these

two scenarios with several related works and case studies Chapter 5 shows how task knowledge and task models can contribute to addressing emerging retrieval and recommendation problems Chapter 6 covers evaluation methodologies and metrics for task based systems with relevant case studies to demonstrate their uses Finally the book concludes in Chapter 7 with ideas for future directions in this important research area Children's Internet Search Elizabeth Foss, Allison Druin, 2022-05-31 Searching the Internet and the ability to competently use search engines are increasingly becoming an important part of children's daily lives Whether mobile or at home children use search interfaces to explore personal interests complete academic assignments and have social interaction However engaging with search also means engaging with an ever changing and evolving search landscape There are continual software updates multiple devices used to search e.g. phones tablets an increasing use of social media and constantly updated Internet content For young searchers this can require infinite adaptability or mean being hopelessly confused This book offers a perspective centered on children's search experiences as a whole instead of thinking of search as a process with separate and potentially problematic steps Reading the prior literature with a child centered view of search reveals that children have been remarkably consistent over time as searchers displaying the same search strategies regardless of the landscape of search However no research has synthesized these consistent patterns in children's search across the literature and only recently have these patterns been uncovered as distinct search roles or searcher types Based on a four year longitudinal study on children's search experiences this book weaves together the disparate evidence in the literature through the use of 9 search roles for children ages 7-15 The search role framework has a distinct advantage because it encourages adult stakeholders to design children's search tools to support and educate children at their existing levels of search strength and deficit rather than expecting children to adapt to a transient search landscape **Multiculturalism and Information and Communication Technology** Pnina

Fichman, Madelyn Sanfilippo, 2022-05-31 Research on multiculturalism and information and communication technology (ICT) has been important to understanding recent history planning for future large scale initiatives and understanding unrealized expectations for social and technological change This interdisciplinary area of research has examined interactions between ICT and culture at the group and society levels However there is debate within the literature as to the nature of the relationship between culture and technology In this synthesis we suggest that the tensions result from the competing ideologies that drive researchers allowing us to conceptualize the relationship between culture and ICT under three primary models each with its own assumptions 1 Social informatics 2 Social determinism and 3 Technological determinism Social informatics views the relationship to be one of sociotechnical interaction in which culture and ICTs affect each other mutually and iteratively rather than linearly the vast majority of the literature approach the relationships between ICT and culture under the assumptions of social informatics From a socially deterministic perspective ICTs are viewed as the dependent variable in the equation whereas from a technologically deterministic perspective ICTs are an independent variable The

issues of multiculturalism and ICTs attracted much scholarly attention and have been explored under a myriad of contexts with substantial literature on global development social and political issues business and public administration as well as education and scholarly collaboration We synthesize here research in the areas of global development social and political issues and business collaboration Finally we conclude by proposing under explored areas for future research directions

Compatibility Modeling Xuemeng Song,Liqiang Nie,Yinglong Wang,2022-06-01 Nowadays fashion has become an essential aspect of people s daily life As each outfit usually comprises several complementary items such as a top bottom shoes and accessories a proper outfit largely relies on the harmonious matching of these items Nevertheless not everyone is good at outfit composition especially those who have a poor fashion aesthetic Fortunately in recent years the number of online fashion oriented communities like IQON and Chictopia as well as e commerce sites like Amazon and eBay has grown The tremendous amount of real world data regarding people s various fashion behaviors has opened a door to automatic clothing matching Despite its significant value compatibility modeling for clothing matching that assesses the compatibility score for a given set of equal or more than two fashion items e g a blouse and a skirt yields tough challenges a the absence of comprehensive benchmark b comprehensive compatibility modeling with the multi modal feature variables is largely untapped c how to utilize the domain knowledge to guide the machine learning d how to enhance the interpretability of the compatibility modeling and e how to model the user factor in the personalized compatibility modeling These challenges have been largely unexplored to date In this book we shed light on several state of the art theories on compatibility modeling In particular to facilitate the research we first build three large scale benchmark datasets from different online fashion websites including IQON and Amazon We then introduce a general data driven compatibility modeling scheme based on advanced neural networks To make use of the abundant fashion domain knowledge i e clothing matching rules we next present a novel knowledge guided compatibility modeling framework Thereafter to enhance the model interpretability we put forward a prototype wise interpretable compatibility modeling approach Following that noticing the subjective aesthetics of users we extend the general compatibility modeling to the personalized version Moreover we further study the real world problem of personalized capsule wardrobe creation aiming to generate a minimum collection of garments that is both compatible and suitable for the user Finally we conclude the book and present future research directions such as the generative compatibility modeling virtual try on with arbitrary poses and clothing generation

Social Informatics Evolving Pnina Fichman,Madelyn R. Sanfilippo,Howard Rosenbaum,2022-05-31 The study of people information and communication technologies and the contexts in which these technologies are designed implemented and used has long interested scholars in a wide range of disciplines including the social study of computing science and technology studies the sociology of technology and management information systems As ICT use has spread from organizations into the larger world these devices have become routine information appliances in our social lives researchers have begun to ask deeper and more

profound questions about how our lives have become bound up with technologies A common theme running through this research is that the relationships among people technology and context are dynamic complex and critically important to understand This book explores social informatics SI one important and dynamic approach that researchers have used to study these complex relationships SI is the interdisciplinary study of the design uses and consequences of information technology that takes into account their interaction with institutional and cultural contexts Kling 1998 p 52 1999 SI provides flexible frameworks to explore complex and dynamic socio technical interactions As a domain of study related largely by common vocabulary and conclusions SI critically examines common conceptions of and expectations for technology by providing contextual evidence This book describes the evolution of SI research and identifies challenges and opportunities for future research In what might be seen as an example of socio technical natural selection SI emerged in six different locations during the 1980s and 1990s Norway Slovenia Japan the former Soviet Union the UK and last the U S As SI evolved the version popularized in the US became globally dominant The evolution of SI is presented in five stages emergence foundational expansion coherence and transformation Thus we divide SI research into five major periods an emergence stage when various forms of SI emerged around the globe an early period of foundational work which grounds SI Pre 1990s a period of expansion 1990s a robust period of coherence and influence by Rob Kling 2000 2005 and a period of transformation 2006 present Following the description of the five periods we discuss the evolution throughout the periods under five sections principles concepts approaches topics and findings Principles refer to the overarching motivations and labels employed to describe scholarly work Approaches describe the theories frameworks and models employed in analysis emphasizing the multi disciplinary and interdisciplinary nature of SI Concepts include specific processes entities themes and elements of discourse within a given context revealing a shared SI language surrounding change complexity consequences and social elements of technology Topics label the issues and general domains studied within social informatics ranging from scholarly communication to online communities to information systems Findings from seminal SI works illustrate growing insights over time and demonstrate how repeatable explanations unify SI In the concluding remarks we raise questions about the possible futures of SI research

Digital Libraries for Cultural Heritage Tatjana Aparac-Jelušić, 2022-05-31 European digital libraries have existed in diverse forms and with quite different functions priorities and aims However there are some common features of European based initiatives that are relevant to non European communities There are now many more challenges and changes than ever before and the development rate of new digital libraries is ever accelerating Delivering educational cultural and research resources especially from major scientific and cultural organizations has become a core mission of these organizations Using these resources they will be able to investigate educate and elucidate in order to promote and disseminate and to preserve civilization Extremely important in conceptualizing the digital environment priorities in Europe was its cultural heritage and the feeling that these rich resources should be open to Europe and the

global community In this book we focus on European digitized heritage and digital culture and its potential in the digital age We specifically look at the EU and its approaches to digitization and digital culture problems detected and achievements reached all with an emphasis on digital cultural heritage We seek to report on important documents that were prepared on digitization copyright and related documents research and education in the digital libraries field under the auspices of the EU some other European and national initiatives and funded projects The aim of this book is to discuss the development of digital libraries in the European context by presenting primarily to non European communities interested in digital libraries the phenomena initiatives and developments that dominated in Europe We describe the main projects and their outcomes and shine a light on the number of challenges that have been inspiring new approaches cooperative efforts and the use of research methodology at different stages of the digital libraries development The specific goals are reflected in the structure of the book which can be conceived as a guide to several main topics and sub topics However the author s scope is far from being comprehensive since the field of digital libraries is very complex and digital libraries for cultural heritage is even moreso

On the Efficient Determination of Most Near Neighbors Mark S. Manasse, 2022-05-31 The time worn aphorism close only counts in horseshoes and hand grenades is clearly inadequate Close also counts in golf shuffleboard archery darts curling and other games of accuracy in which hitting the precise center of the target isn t to be expected every time or in which we can expect to be driven from the target by skilled opponents This book is not devoted to sports discussions but to efficient algorithms for determining pairs of closely related web pages and a few other situations in which we have found that inexact matching is good enough where proximity suffices We will not however attempt to be comprehensive in the investigation of probabilistic algorithms approximation algorithms or even techniques for organizing the discovery of nearest neighbors We are more concerned with finding nearby neighbors if they are not particularly close by we are not particularly interested In thinking of when approximation is sufficient remember the oft told joke about two campers sitting around after dinner They hear noises coming towards them One of them reaches for a pair of running shoes and starts to don them The second then notes that even with running shoes they cannot hope to outrun a bear to which the first notes that most likely the bear will be satiated after catching the slower of them We seek problems in which we don t need to be faster than the bear just faster than the others fleeing the bear

The Practice of Crowdsourcing Omar Alonso, 2022-06-01 Many data intensive applications that use machine learning or artificial intelligence techniques depend on humans providing the initial dataset enabling algorithms to process the rest or for other humans to evaluate the performance of such algorithms Not only can labeled data for training and evaluation be collected faster cheaper and easier than ever before but we now see the emergence of hybrid human machine software that combines computations performed by humans and machines in conjunction There are however real world practical issues with the adoption of human computation and crowdsourcing Building systems and data processing pipelines that require crowd computing remains difficult In this book

we present practical considerations for designing and implementing tasks that require the use of humans and machines in combination with the goal of producing high quality labels

Incidental Exposure to Online News Borchuluun

Yadamsuren, Sanda Erdelez, 2022-05-31 Rapid technological changes and availability of news anywhere and at any moment have changed how people seek out news. Increasingly, consumers no longer take deliberate actions to read the news, instead stumbling upon news online. While the emergence of serendipitous news discovery online has been recognized in the literature, there is a limited understanding about how people experience this behavior. Based on the mixed method study that investigated online news reading behavior of residents in a Midwestern U.S. town, we explore how people accidentally discover news when engaged in various online activities. Employing the grounded theory approach, we define Incidental Exposure to Online News (IEON) as individuals' memorable experiences of chance encounters with interesting, useful, or surprising news while using the Internet for news browsing or for non-news related online activities such as checking email or visiting social networking sites. The book presents a conceptual framework of IEON that advances research and an understanding of serendipitous news discovery from people's holistic experiences of news consumption in their everyday lives. The proposed IEON Process Model identifies key steps in an IEON experience that could help news reporters and developers of online news platforms create innovative storytelling and design strategies to catch consumers' attention during their online activities. Finally, this book raises important methodological questions for further investigation: how should serendipitous news discovery be studied, measured, and observed, and what are the essential elements that differentiate this behavior from other types of online news consumption and information behaviors.

Images in Social Media Susanne

Ørnager, Haakon Lund, 2022-06-01 This book focuses on the methodologies, organization, and communication of digital image collection research that utilizes social media content. Image is here understood as a cultural, conventional, and commercial stock photo representation. The lecture offers expert views that provide different interpretations of images and their potential implementations. Linguistic and semiotic methodologies as well as eye tracking research are employed to both analyze images and comprehend how humans consider them, including which salient features generally attract viewers' attention. This literature review covers image, specifically photographic, research since 2005 when major social media platforms emerged. A citation analysis includes an overview of co-citation maps that demonstrate the nexus of image research literature and the journals in which they appear. Eye tracking tests whether scholarly templates focus on the proper features of an image such as people, objects, time, etc., and if a prescribed theme affects the eye movements of the observer. The results may point to renewed requirements for building image search engines. As it stands, image management already requires new algorithms and a new understanding that involves text recognition and very large database processing. The aim of this book is to present different image research areas and demonstrate the challenges image research faces. The book's scope is, by necessity, far from comprehensive since the field of digital image research does not cover fake news, image manipulation, mobile photos, etc.

these issues are very complex and need a publication of their own This book should primarily be useful for students in library and information science psychology and computer science

Transforming Technologies to Manage Our Information

William Jones, 2022-05-31 With its theme Our Information Always and Forever Part I of this book covers the basics of personal information management PIM including six essential activities of PIM and six different ways in which information can be personal to us Part I then goes on to explore key issues that arise in the great migration of our information onto the Web and into a myriad of mobile devices Part 2 provides a more focused look at technologies for managing information that promise to profoundly alter our practices of PIM and through these practices the way we lead our lives Part 2 is in five chapters Chapter 5 Technologies of Input and Output Technologies in support of gesture touch voice and even eye movements combine to support a more natural user interface NUI Technologies of output include glasses and watch watches Output will also increasingly be animated with options to zoom Chapter 6 Technologies to Save Our Information We can opt for life logs to record our experiences with increasing fidelity What will we use these logs for And what isn't recorded that should be Chapter 7 Technologies to Search Our Information The potential for personalized search is enormous and mostly yet to be realized Persistent searches situated in our information landscape will allow us to maintain a diversity of projects and areas of interest without a need to continually switch from one to another to handle incoming information Chapter 8 Technologies to Structure Our Information Structure is key if we are to keep find and make effective use of our information But how best to structure And how best to share structured information between the applications we use with other people and also with ourselves over time What lessons can we draw from the failures and successes in web based efforts to share structure Chapter 9 PIM Transformed and Transforming Stories from the Past Present and Future Part 2 concludes with a comparison between Licklider's world of information in 1957 and our own world of information today And then we consider what the world of information is likely to look like in 2057 Licklider estimated that he spent 85% of his thinking time in activities that were clerical and mechanical and might someday be delegated to the computer What percentage of our own time is spent with the clerical and mechanical What about in 2057

Exploring Context in Information Behavior

Naresh Kumar Agarwal, 2022-05-31 The field of human information behavior runs the gamut of processes from the realization of a need or gap in understanding to the search for information from one or more sources to fill that gap to the use of that information to complete a task at hand or to satisfy a curiosity as well as other behaviors such as avoiding information or finding information serendipitously Designers of mechanisms tools and computer based systems to facilitate this seeking and search process often lack a full knowledge of the context surrounding the search This context may vary depending on the job or role of the person individual characteristics such as personality domain knowledge age gender perception of self etc the task at hand the source and the channel and their degree of accessibility and usability and the relationship that the seeker shares with the source Yet researchers have yet to agree on what context really means While there have been various

research studies incorporating context and biennial conferences on context in information behavior there lacks a clear definition of what context is what its boundaries are and what elements and variables comprise context In this book we look at the many definitions of and the theoretical and empirical studies on context and I attempt to map the conceptual space of context in information behavior I propose theoretical frameworks to map the boundaries elements and variables of context I then discuss how to incorporate these frameworks and variables in the design of research studies on context We then arrive at a unified definition of context This book should provide designers of search systems a better understanding of context as they seek to meet the needs and demands of information seekers It will be an important resource for researchers in Library and Information Science especially doctoral students looking for one resource that covers an exhaustive range of the most current literature related to context the best selection of classics and a synthesis of these into theoretical frameworks and a unified definition The book should help to move forward research in the field by clarifying the elements variables and views that are pertinent In particular the list of elements to be considered and the variables associated with each element will be extremely useful to researchers wanting to include the influences of context in their studies

Information

use of the tools we already have Chapter 12 To Each of Us Our Own concludes with an exploration of the ways each of us individually can develop better practices for the management of our information in service of the lives we wish to live and toward a better world we all must share **Framing Privacy in Digital Collections with Ethical Decision Making**

Virginia Dressler, 2022-06-01 As digital collections continue to grow the underlying technologies to serve up content also continue to expand and develop As such new challenges are presented which continue to test ethical ideologies in everyday environs of the practitioner There are currently no solid guidelines or overarching codes of ethics to address such issues The digitization of modern archival collections in particular presents interesting conundrums when factors of privacy are weighed and reviewed in both small and mass digitization initiatives Ethical decision making needs to be present at the onset of project planning in digital projects of all sizes and we also need to identify the role and responsibility of the practitioner to make more virtuous decisions on behalf of those with no voice or awareness of potential privacy breaches In this book notions of what constitutes private information are discussed as is the potential presence of such information in both analog and digital collections This book lays groundwork to introduce the topic of privacy within digital collections by providing some examples from documented real world scenarios and making recommendations for future research A discussion of the notion privacy as concept will be included as well as some historical perspective with perhaps one the most cited work on this topic for example Warren and Brandeis Right to Privacy 1890 Concepts from the The Right to Be Forgotten case in 2014 Google Spain SL Google Inc v Agencia Espa la de Proteccei n de Datos Mario Costeja Gonz lez are discussed as to how some lessons may be drawn from the response in Europe and also how European data privacy laws have been applied The European ideologies are contrasted with the Right to Free Speech in the First Amendment in the U S highlighting the complexities in setting guidelines and practices revolving around privacy issues when applied to real life scenarios Two ethical theories are explored Consequentialism and Deontological Finally ethical decision making models will also be applied to our framework of digital collections Three case studies are presented to illustrate how privacy can be defined within digital collections in some real world examples **Digital Libraries Applications** Edward A. Fox, Jonathan P.

Leidig, 2022-05-31 Digital libraries DLs have evolved since their launch in 1991 into an important type of information system with widespread application This volume advances that trend further by describing new research and development in the DL field that builds upon the 5S Societies Scenarios Spaces Structures Streams framework which is discussed in three other DL volumes in this series While the 5S framework may be used to describe many types of information systems and is likely to have even broader utility and appeal we focus here on digital libraries Drawing upon six Akbar Kozievitch Leidig Li Murthy Park completed and two Chen Fouh in process dissertations as well as the efforts of collaborating researchers and scores of related publications presentations tutorials and reports this book demonstrates the applicability of 5S in five digital library application areas that also have importance in the context of the WWW Web 2 0 and innovative information systems By

integrating surveys of the state of the art newresearch connections with formalization case studies and exercises projects this book can serve as a textbook for those interested in computing information and or library science Chapter 1 focuses on images explaining how they connect with information retrieval in the context of CBIR systems Chapter 2 gives two case studies of DLs used in education which is one of the most common applications of digital libraries Chapter 3 covers social networks which are at the heart of work onWeb 2 0 explaining the construction and use of deduced graphs that can enhance retrieval and recommendation Chapter 4 demonstrates the value of DLs in eScience focusing in particular on cyber infrastructure for simulation Chapter 5 surveys geospatial information in DLs with a case study on geocoding Given this rich content we trust that any interested in digital libraries or in related systems will find this volume to be motivating intellectually satisfying and useful We hope it will help move digital libraries forward into a science as well as a practice We hope it will help build community that will address the needs of the next generation of DLs
