Section 2 GEOMETRIC PROGRESSIONS

A geometric progression is a list of terms as in an arithmetic progression but in this case the ratio of successive terms is a constant. In other words, each term is a constant times the term that immediately precedes it. Let's write the terms in a geometric progression as u_1, u_2, u_3, u_4 and so on. An example of a geometric progression is

$$10, 100, 1000, 10000, \dots$$

Since the ratio of successive terms is constant, we have

$$\begin{aligned} \frac{u_3}{u_2} &= \frac{u_2}{u_1} \quad \text{and} \\ \frac{u_{n+1}}{u_n} &= \frac{u_2}{u_1} \end{aligned}$$

The ratio of successive terms is usually denoted by r and the first term again is usually written a .
