Research in Systems Analysis and Design: Models and Methods Stanisław Wrycza, 2011-11-29 This book constitutes the proceedings of the 4th EuroSymposium on Systems Analysis and Design SIGSAND PLAIS 2011 held in Gdańsk Poland in September 2011. The objective of this symposium is to promote and develop high quality research on all issues related to systems analysis and design. It provides a forum for SAND researchers and practitioners in Europe and beyond to interact, collaborate and develop their field. The 9 papers were carefully reviewed and selected from 20 submissions. An additional revision took place after the conference to incorporate discussion results from the presentation. The contributions are organized into topical sections on business process modeling, integrated systems development and software development.

System Analysis and Modeling: Models and Reusability Daniel Amyot, Pau Fonseca i Casas, Gunter Mussbacher, 2014-09-24 This book constitutes the refereed papers of the proceedings of the 8th International Conference on System Analysis and Modeling SAM 2014 held in Valencia, Spain, in September 2014. The 18 full papers and the 3 short papers presented together with 2 keynotes were carefully reviewed and selected from 71 submissions. The contributions are organized in topical sections named: reuse, availability, safety and optimization, sequences and interactions, testing, metrics, constraints and repositories, and SDL and VV.

Guidelines for Design Solutions for Process Equipment Failures CCPS (Center for Chemical Process Safety), 2010-09-17 While there is no perfect solution or absolute zero risk, engineering design can significantly reduce risk potential in the CPI. In *Guidelines for Design Solutions to Process Equipment Failures*, industry experts offer their broad experience in identifying numerous solutions to the more common process equipment failures, including inherent safer, passive, active and procedural solutions, in decreasing order of robustness and reliability. The book challenges the engineer to identify opportunities for inherent and passive safety features early and use a risk-based approach to process safety systems specification. The book is organized into three basic sections: 1. a technique for making risk-based design decisions; 2. potential failure scenarios for 10 major processing equipment categories; and 3. two worked examples showing how the techniques can be applied. The equipment categories covered are vessels, reactors, mass transfer equipment, fluid transfer equipment, solids fluid separators, solids handling and processing equipment, and piping and piping components. Special Details. Hardcover book plus 3.5 diskette for use in any word processing program with design solutions for use in PHAs.

Systems Analysis and Design Kenneth E. Kendall, Julie E.
