Information Systems Engineering Arne Soelvsberg, David C. Kung, 2012-12-06 This book presents a selection of subjects which the authors deem to be important for information systems engineers The book is intended for introductory teaching We have tried to write the book in such a way that students with only fragmented knowledge of computers are able to read the book without too many difficulties Students who have had only an introductory course in computer programming should be able to read most of the book We have tried to achieve simplicity without compromising on depth in our discussions of the various aspects of information systems engineering So it is our hope that also those who have deeper knowledge in computing may find pleasure in reading parts of the book The writing of a textbook is a major undertaking for its authors One is quite often forced to reexamine truisms in the subject area and must be prepared to reevaluate one s opinions and priorities as one learns more In particular this is so in new fields where formalisms have been scarcely used and where consensus has not yet emerged either on what constitutes the subject area or on how practical problems within the field shall be approached Contemporary practice in computer applications is confronted with an increasingly complex world both in a technical sense and in the complexity of problems that are solved by computer

Parallel Numerical Computation with Applications Laurence Tianruo Yang, 2012-12-06 Parallel Numerical Computations with Applications contains selected edited papers presented at the 1998 Frontiers of Parallel Numerical Computations and Applications Workshop along with invited papers from leading researchers around the world These papers cover a broad spectrum of topics on parallel numerical computation with applications such as advanced parallel numerical and computational optimization methods novel parallel computing techniques numerical fluid mechanics and other applications related to material sciences signal and image processing semiconductor technology and electronic circuits and systems design This state of the art volume will be an up to date resource for researchers in the areas of parallel and distributed computing
