

SYSWELD, the Driving Force for Welding Simulation Technology, from Process...

SYSWELD, the complete solution for handling virtual welding

SYSWELD guides engineers to:

• Evaluate residual distortions

Assembling a structure requires sequential continuous and/or spot welding joints. Therefore, defining the welding sequence and the places where the parts will be welded is crucial for the correct completion of the welding assembly process. Simulation allows prediction and minimization of distortions which generate an increase of the overall product quality as well as drastic cost saving.

• Minimize residual stresses

Simulating the welding process aims to control the process in a way that minimizes the stress gradient and tensile surface stresses. As a result, lifetime of a part increases as fewer cracks appear after load cycles. Compressive stresses can also be detected on the surface of the component, therefore improving part quality and avoiding corrosion risks due to tensile stresses.

• Study the sensitivity of geometry, material and process parameters

Used in the design phases, SYSWELD decreases costly design errors. At each step of the development cycle, the cost of corrections gradually increases. SYSWELD helps to optimize part geometry, materials and process parameters during the early stages of a new design cycle avoiding expensive engineering changes that could occur later.

• Optimize the welding process

SYSWELD allows user-defined weld sequencing and control of the weld manufacturing parameters such as velocity, energy input and many others.

SYSWELD answers engineers' questions

Empowered by the Finite technology, an automatic solver, and a multi-physics post-processor, SYSWELD takes into account multiple factors such as:

- Process parameters,
- Part geometry,
- Thermal, metallurgical and mechanical material behavior.

SYSWELD features a comprehensive material database that covers the major steels and aluminum alloys in the market.

SYSWELD simulates all major Welding processes

• Continuous welding

- Laser,
- MIG,
- Electron-beam,
- ...

"The challenge in the aircraft industry is to increase the life span of components. Welding repairs are categorized using SYSWELD as many different kinds of defects."

• Resistance and Spot welding

"Spot welding is very common in the automobile industry. With the coupling between electro-magnetism, heat transfer, metallurgy and mechanics, this process is accurately simulated with SYSWELD."
