Liernur, 2024-07-15 The book challenges three perspectives on the modern architectural canon explanations that disregard impacts and effects beyond the North Atlantic monologic superficial modifications that simply add Other figures to the canon and views that reject the canon itself Instead it recognizes the canon s significance in comprehending architecture while seeking to uncover its presumed Western centric integrity through a shift from a monological to a dialogical approach This approach integrates concepts of identity and Otherness as dialectically articulated and mutually interrelated In essence the book s main thesis contends that the canon s historiographic construction overlooked the existence of Otherness specifically neglecting the world beyond the North Atlantic nucleus of the West By examining a global context to comprehend the canon formation the book proposes a more accurate understanding of the history of modern architecture Recognizing that this task cannot emanate from a single hegemonic center it presents the prospect of a coral type architectural history This narrative should and could encompass voices from diverse cultures to explore the particular circumstances of the world intertwined with each piece or figure transiently integrated into that canon As a result the ideal readers of this book position themselves within multiple settings keen on engaging in a critical global conversation about modern architectural discourse It will be of interest to researchers and students of architecture architectural history and cultural studies **Jumpstart Snowflake**
