Hughes, Johannes M.C. Mol, Mikhail L. Zheludkevich, Rudolph G. Buchheit, 2016-03-01 This book covers a broad range of materials science that has been brought to bear on providing solutions to the challenges of developing self healing and protective coatings for a range of metals The book has a strong emphasis on characterisation techniques particularly new techniques that are beginning to be used in the coatings area It features many contributions written by experts from various industrial sectors which examine the needs of the sectors and the state of the art The development of self healing and protective coatings has been an expanding field in recent years and applies a lot of new knowledge gained from other fields as well as other areas of materials science to the development of coatings It has borrowed from fields such as the food and pharmaceutical industries who have used polymer techniques sol gel science and colloidosome technology for a range of encapsulation techniques It has also borrowed from fields like hydrogen storage such as from the development of hierarchical and other materials based on organic templating as nanocontainers for the delivery of inhibitors In materials science recent developments in high throughput and other characterisation techniques such as those available from synchrotrons are being increasingly used for novel characterisation one only needs to look at the application of these techniques in self healing polymers to gauge wealth of new information that has been gained from these techniques This work is largely driven by the need to replace environmental pollutants and hazardous chemicals that represent risk to humans such as chromate inhibitors which are still used in some applications *Handbook for Critical Cleaning, Second Edition - 2 Volume Set* Barbara Kanegsberg, Edward Kanegsberg, 2020-01-02 This set consists of two volumes Cleaning Agents and Systems and Applications Processes and Controls Updated expanded re organized and rewritten this two volume handbook covers cleaning processes applications management safety and environmental concerns The editors rigorously examine technical issues cleaning agent options and systems chemical and equipment integration and contamination control as well as cleanliness standards analytical testing process selection implementation and maintenance specific application
