the intensive margin in the empirical analyses for the research presented here we tested these hypotheses focusing on the differences among marginal adopters of tractor hiring services and non adopters with similar characteristics The results are three fold 1 adoptions patterns of tractor services are partly explained by basic factor endowments suggesting that the market for custom hiring is in some way functioning efficiently in response to economic conditions 2 adoptions are however affected by supply side factors including the presence of large farm households and thus potential tractor owners within the district and 3 per capita household expenditure level differs significantly between the marginal adopters and non adopters with similar characteristics This difference seems to arise from adoption per se rather than the intensity of adoption which is consistent with the hypothesis of imperfection in the custom tractor hiring market Court-martial Reports ,1953
