Parliament. House of Commons. Energy and Climate Change Committee, 2013 Failure to build a new fleet of nuclear power stations in the UK could make it much more expensive to meet our climate change targets and Ministers must urgently develop a back up energy strategy The nuclear industry has outlined plans that would deliver 16GW new nuclear power stations by 2025 Although the Government and industry have learnt some important lessons from this process there are still a number of obstacles which could delay new build projects in the UK The Committee supports the Government's use of Contracts for Difference CfDs to help make new nuclear power stations easier to finance but are concerned at the lack of transparency around the price negotiations The new contracts must provide value for money for consumers and should not be offered at a price that is higher than other low carbon sources of energy such as offshore wind which is hoped to be around 100 MWh by 2020 Public attitudes have an important role to play in projects to build new nuclear power stations The Committee is concerned that local communities might not be able to take part in planning consultations on an equal footing with the project developers The report recommends that the Government should consider providing more support to local community groups so that they can engage better with the planning process The Government has plans to allow local authorities hosting renewable energy projects to retain business rates The report argues that this scheme should be extended to new nuclear projects too
