occurred as graduate students of Prof William Donn who had established an infrasound array at the Lamont Doherty Geological Observatory now the Lamont Doherty Earth Observatory of Columbia University It was a natural outgrowth of another major activity at Lamont using seismic waves to explore the Earth s interior Both the atmosphere and the solid Earth feature velocity seismic or acoustic gradients in the vertical which act to refract the respective waves The refraction in turn allows one to calculate the respective background structure in these mediums indirectly exploring locations that are hard to observe otherwise Monitoring these signals also allows one to discover various phenomena both natural and man made some of which have military applications *Marine Fisheries Abstracts* ,1974 [Review of the Draft Fourth National Climate Assessment](#) National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Board on Environmental Change and Society, Board on Atmospheric Sciences and Climate, Committee to Review the Draft Fourth National Climate Assessment, 2018-05-18 Climate change poses many challenges that affect society and the natural world With these challenges however come opportunities to respond By taking steps to adapt to and mitigate climate change the risks to society and the impacts of continued climate change can be lessened The National Climate Assessment coordinated by the U S Global Change Research Program is a mandated report intended to inform response decisions Required to be developed every four years these reports provide the most comprehensive and up to date evaluation of climate change impacts available for the United States making them a unique and important climate change document The draft Fourth National Climate Assessment NCA4 report reviewed here addresses a wide range of topics of high importance to the United States and society more broadly extending from human health and community well being to the built environment to businesses and economies to ecosystems and natural resources This report evaluates the draft NCA4 to determine if it meets the requirements of the federal mandate whether it provides accurate information grounded in the scientific literature and whether it effectively communicates climate science impacts and responses for general audiences including the public decision makers and other stakeholders **Resources in Education** ,1995 *Air University Periodical Index* ,1958 [Air University Library Index to Military Periodicals](#) ,1958

Marine Ecosystem Assessment for the Southern Ocean: Meeting the Challenge for Conserving Earth Ecosystems in the Long Term Monica M. C. Muelbert, 2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e g fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of

international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example assessments of change in habitats species and or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018-2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after
