The Q-Center will be offering tutoring in Statistics

COURSE DESCRIPTION:

In this course we will take a critical look at data: how can we organize, analyze and interpret data, how can we use data to make decisions, what role does randomness play in our decision making? I like to divide the course into 4 major components:

1. Descriptive Statistics: We begin by taking raw data (univariate and bivariate) and organizing it into useful graphical displays. Next, we summarize the data numerically using measures of central tendency, measures of variation and linear regression.
2. Data Collection Designs: We discuss different techniques for collecting data, selecting samples and designing questionnaires. We compare observational studies to randomized experiments and discuss the advantages and disadvantages of each these two methods of data collection.
3. Probability: We discuss basic probability theory using tree diagrams and Venn Diagrams. We look at discrete and continuous probability models that are used in statistical analyses.
