Artificial Neural Nets and Genetic Algorithms George D. Smith, Nigel C. Steele, Rudolf F. Albrecht, 2012-12-06 This is the third in a series of conferences devoted primarily to the theory and applications of artificial neural networks and genetic algorithms The first such event was held in Innsbruck Austria in April 1993 the second in Ales France in April 1995 We are pleased to host the 1997 event in the mediaeval city of Norwich England and to carry on the fine tradition set by its predecessors of providing a relaxed and stimulating environment for both established and emerging researchers working in these and other related fields This series of conferences is unique in recognising the relation between the two main themes of artificial neural networks and genetic algorithms each having its origin in a natural process fundamental to life on earth and each now well established as a paradigm fundamental to continuing technological development through the solution of complex industrial commercial and financial problems This is well illustrated in this volume by the numerous applications of both paradigms to new and challenging problems The third key theme of the series therefore is the integration of both technologies either through the use of the genetic algorithm to construct the most effective network architecture for the problem in hand or more recently the use of neural networks as approximate fitness functions for a genetic algorithm searching for good solutions in an incomplete solution space i e one for which the fitness is not easily established for every possible solution instance

Advanced Mapping of Environmental Data Mikhail Kanevski, 2013-05-10 This book combines geostatistics and global mapping systems to present an up to the minute study of environmental data Featuring numerous case studies the reference covers model dependent geostatistics and data driven machine learning algorithms analysis techniques such as risk mapping conditional stochastic simulations descriptions of spatial uncertainty and variability artificial neural networks ANN for spatial data Bayesian maximum entropy BME and more

Linear Genetic Programming Markus F. Brameier, Wolfgang Banzhaf, 2007-02-25 Linear Genetic Programming presents a variant of genetic programming GP that evolves imperative computer programs as linear sequences of instructions in contrast to the more traditional functional expressions or syntax trees Primary characteristics of linear program structure

are exploited to achieve acceleration of both execution time and evolutionary progress Online analysis and optimization of program code lead to more efficient techniques and contribute to a better understanding of the method and its parameters In particular the reduction of structural variation step size and non effective variations play a key role in finding higher quality and less complex solutions Typical GP phenomena such as non effective code neutral variations and code growth are investigated from the perspective of linear GP This book serves as a reference for researchers it also contains sufficient introductory material for students and those who are new to the field

Psychophysical Approaches to Cognition

D. Algom,1992-08-20 Our lives are informed by perceptual and cognitive processes at all levels from instrumental learning to metaphorical discourse to memorial representation Yet historically these two branches of experimental psychology perception and cognition have developed separately using independent methods of experimentation and analysis This volume is motivated by the assumption that a fundamental integration of the two fields is fruitful methodologically and indispensable theoretically It explores how the notion of psychophysics aligned with cognitive processes shapes the study of perception and cognition and illuminates a variety of contemporary research issues from a novel theoretical perspective The papers raise conceptual and metatheoretical issues against the background of relevant empirical data The authors provide a virtually narrative account of the most recent developments in their respective fields of expertise in psychophysics and cognitive psychology Hence this volume gives the interested reader an opportunity to reflect critically upon some of the current issues defining the two domains and their conjunction Topics discussed include the psychology and psychophysics of similarity the psychophysics of visual memory and cognitive factors in judgment The emerging notion of cognitive psychophysics may well warrant the attention of experts in the field

Listening with Two Ears - New Insights and Perspectives in Binaural Research

Huiming Zhang,Yi Zhou,Lina Reiss,2023-11-27 Hearing is dependent on neural processing of acoustic cues obtained by the left and right ears Neural signals driven by the two ears are integrated at multiple levels of the central auditory system which enables animals including humans to perform various functions including localization of a sound source A natural listening environment typically contains sounds from multiple sources These sounds can have different spectral and temporal features and occur at either the same or different time Integration can happen among neural signals elicited by the same or different sounds The way of integration can greatly affect how individual sounds are sensed and perceived Functions such as auditory grouping and stream segregation which are central to establishing coherent auditory images in a complex listening environment are highly dependent on the way of integration Binaural hearing is complicated by individual differences and developmental changes in head and pinna shape size as binaural cues can be affected by these differences and changes

Furthermore neural processing of binaural cues can be influenced by hearing impairments and the use of hearing aids and cochlear implants These factors likely require a listener to optimize the use of binaural cues through learning and to use plastic changes in the nervous system to perform the optimization Great strides have been made in understanding binaural processing in normal and impaired auditory systems This Research Topic aims to highlight some of the latest findings in the following areas 1 Animal behavioral and human psychoacoustical studies of binaural hearing 2 Neural encoding and processing of binaural cues and structural as well as neurophysiological bases of such encoding and processing 3 Contribution of binaural neural processing to auditory functions such as sound source localization binaural fusion binaural interference spatial release from masking auditory grouping and auditory stream segregation 4 Computational models of binaural processing 5 Learning and plastic changes in binaural processing following hearing loss or alterations of acoustic environment and structural as well as physiological bases of these behavioral changes 6 Clinical aspects of binaural processing including application of processing strategies including research on the benefits of bilateral cochlear implantation and the neural correlates thereof
