International Joint Conference on Arts and Humanities 2024 held by the State University of Surabaya This joint conference features four international conferences the International Conference on Education Innovation ICEI 2024 the International Conference on Cultural Studies and Applied Linguistics ICCSAL 2024 the International Conference on Research and Academic Community Services ICRACOS 2024 and the International Conference of Social Science and Law ICSSL 2024 It encourages the dissemination of ideas in arts and humanity and provides a forum for intellectuals from all over the world to discuss and present their research findings on the research area This conference will be held in Surabaya East Java Indonesia on August 26th 2024 September 10th 2024 Proceedings of the 6th International Conference on Combinatorics, Graph Theory, and Network Topology (ICCGANT 2022) Dafik, 2023-04-26 This is an open access book It is with great pleasure and honor to announce The 6th International Conference of Combinatorics Graph Theory and Network Topology which will be held from 15th 16th November 2022 in the University of Jember East Java Indonesia It is the fifth international conference organized by CGANT It is the sixth international conference organized by CGANT Research Group University of Jember in cooperation with Indonesian Combinatorics Society INACOBMS The conference is held to welcome participants from many countries with broad and diverse research interests of mathematics especially combinatorical study. The mission is to become an annual international forum in the future where civil society organization and representative research students academics and researchers scholars scientist teachers and practitioners from all over the world could meet in and exchange an idea to share and to discuss theoretical and practical knowledge about mathematics and its applications The aim of the sixth conference is to present and discuss the latest research that contributes to the sharing of new theoretical methodological and empirical knowledge and a better understanding in the area mathematics application of mathematics as well as mathematics education Mathematical Competencies in the Digital Era Uffe Thomas Jankvist, Eirini Geraniou, 2023-02-20 This book focuses on the potential interplay between two distinct yet related paradigm shifts in mathematics education drawing on the notion of networking of theories through illustrative case studies from the Danish educational system and beyond The first paradigm shift is the massive introduction of digital technology in the teaching and learning of the subject the second is a shift from the traditional focusing on mastering of skills and knowledge to being concerned with the possession and development of mathematical competencies This book builds on the Danish KOM Competencies and the Learning of Mathematics project which sources its description of mathematical mastery primarily on the notion of a mathematical competency rather than on lists of topics concepts and results This allows for an overarching framework which captures the perspectives of mathematics teaching and learning at whichever educational level While the KOM framework does not in detail address the role of digital technologies in relation to its description of different types of mathematical competencies etc the chapters of this book set out to do exactly this while in the process also drawing on a selection of other theoretical constructs and frameworks from mathematics education research Starting with introductory

chapters by key researchers in the area the book brings forth chapters for each of the KOM framework s eight mathematical competencies authored by Nordic researchers in combination with international scholars The KOM framework also operates with three types of overview and judgement which are specifically addressed in relation to the role of digital technologies in the third part of the book The fourth and final part of the book broadens the scene and provides chapters of a more perspective nature in relation to mathematical competencies in the digital era The book s preface is by Susanne Prediger

The Intersection of International Achievement Testing and Educational Policy Louis Volante, 2016-06-10 Educational systems around the world look to student assessment programs as they initiate reforms and revise educational policies to increase student achievement This edited volume examines the intersection of international achievement testing and education policy development in key countries around the world exploring how assessments can inform curriculum pedagogy strategic planning and ultimately determine large scale education policy and governance Noted chapter contributors explore how educational leadership and governance issues have been influenced by assessment programs across a range of political economic cultural and educational contexts The Intersection of International Achievement Testing and Education Policy provides educators academics and policymakers with cultural insights historical contexts and a framework for negotiating and understanding the consequences of educational policy decisions in schools Education at a Glance 2023 Sources, Methodologies and Technical Notes OECD, 2023-09-12 This publication provides additional reference material for Education at a Glance 2023 the authoritative source for data on the state of education around the world It provides quidance on the data and methodology used to calculate each indicator It also contains references to the sources and specific notes for each country Toward a New Science of Educational Testing and Assessment Harold Berlak, Fred M. Newmann, Elizabeth Adams, Doug A. Archbald, Tyrell Burgess, John Raven, 1992-02-06 The authors of this book question the assumptions of the psychometric paradigm that underlie virtually all criterion referenced and standardized tests used in North American schools They make a compelling case for a new science of educational testing and assessment one that shifts decision making from central administration to individual schools and communities Harold Berlak argues that the concept of tests as scientific instruments validated by technical experts is anachronistic and self contradictory. He makes a case for a contextual paradigm an approach which assumes that consensus on educational goals and national testing programs is neither possible nor desireable Assessment practices in a democratic society must acknowledge and affirm differences in values beliefs and material interests among individuals and groups over the purposes and practices of schooling Facing the Consequences W.H. Schmidt, Curtis C. McKnight, Leland S. Cogan, Pamela M. Jakwerth, Richard T. Houang, 2007-05-08 Facing the Consequences presents a perspective on US mathematics and science education that is developed from data gathered as part of the Third International Mathematics and Science Study TIMSS TIMSS is the most extensive and far reaching cross national comparative study of mathematics and science education ever attempted It includes comparing

official curricula textbooks teacher practices and student achievements for many countries from 20 to 50 countries depending on the particular comparison Thousands of official documents and textbooks were analyzed Thousands of teachers principals and other experts responded to survey questionnaires A sample of mathematics teachers in three countries had their lessons videotaped Hundreds of thousands of children in almost 50 countries were tested in mathematics and science This report presents a closer look at US mathematics and science education through careful examination of TIMSS data The authors believe this investigation shows how deceptive many often unquestioned assumptions about American education can be Drawing upon many new analyses not previously reported and integrating these with previous analyses of TIMSS data the authors develop and illustrate the argument that what happens to American students is the consequence of American beliefs that shape educational practice and the accretion of a myriad educational choices made in mathematics and science education National Reflections on the Netherlands Didactics of Mathematics Marja Van den Heuvel-Panhuizen, 2020-01-06 This open access book inspired by the ICME 13 Thematic Afternoon on European Didactic Traditions consists of 17 chapters in which educators from the Netherlands reflect on the teaching and learning of mathematics in their country and the role of the Dutch domain specific instruction theory of Realistic Mathematics Education Written by mathematics teachers mathematics teacher educators school advisors and developers and researchers in the field of instructional material textbooks and examinations the book offers a multitude of perspectives on important issues in Dutch mathematics education both at primary and secondary school levels Topics addressed include the theoretical underpinnings of the Dutch approach the subject of mathematics in the Dutch educational system teacher education and testing the history of mathematics education and the use of history in teaching of mathematics changes over time in subject matter domains and in the use of technology and the process of innovation and how the Dutch and in particular one Dutch institute have worked Learning From Others Diane Shorrocks-Taylor, Edgar W. Jenkins, 2005-12-20 Diane Shorrocks Taylor on the reform School of Education University of Leeds UK In September 1998 a conference was held at the University of Leeds entitled International comparisons of pupil performance issues and policy It was arranged by two groups within the School of Education at the University the newly formed Assessment and Evaluation Unit and the Centre for Studies in Science and Mathematics Education Thejoint interest in international comparisons of performance had itself arisen from earlier involvement in a follow up study of the 1995 TIMSS work in England reported in a later chapter in this book in which the TIMSS assessment outcomes were studied alongside the outcomes from the National Curriculum testing programme in England Some of the results of this investigation had proved both interesting and challenging so the decision was made to promote wider discussion of some key issues by inviting contributors from all over the world to a meeting the major aims of which were to promote an exploration of the theoretical foundations of international comparative studies of student performance the practical problems of carrying out such studies the appropriateness of the assessment models and

approaches used in international comparisons the role of international comparative studies in raising standards of student performance and how international studies affect the shaping of national policy on education *PISA 2022 Results (Volume IV) How Financially Smart Are Students?* OECD,2024-06-27 This volume presents the financial literacy results of the OECD Programme for International Student Assessment PISA 2022 and examines 15 year old students understanding of money matters in 20 countries and economies It explores the links between their financial literacy and their competencies in mathematics and reading and differences across socio demographic groups It also offers an overview of their experiences with money their financial behaviour and attitudes and their exposure to financial literacy at home and in school
