increased processing complexity presumably owing to its ability to facilitate early phrase structure recognition the more transparent one to one relation between form and function and possibly because the degree marker more can serve as a structural signal foreshadowing cognitive complexity A bird s eye view of 24 determinants reveals that the processing effort which triggers the analytic comparative emanates from structures that are phonologically morphologically syntactically lexically semantically or pragmatically complex By bridging the gap between corpus based variation research and psycholinguistic and typological approaches the book breaks new ground in uncovering the functional motivation behind the continued variability of synthetic analytic contrasts **Report** United States.
