A01- localisation of function - **ANS** Localisation of function refers to the belief that specific areas of the brain are responsible for particular physical and psychological functions.

A01- motor area - **ANS** The motor area, located at the back of the frontal lobe, is responsible for voluntary movement by sending signals to muscles in the body; the right hemisphere controls left half of body and left hemisphere controls the right half of body.

Auditory- broca's area - **ANS** Broca's area, located in the left frontal lobe, is involved with speech production; if this is damaged a person's speech is slow and lacks fluency

Auditory- somatosensory area - **ANS** The somatosensory area, located at the front of the parietal lobe, receives incoming sensory information from the skin to produce sensations related to pressure, temperature and pain.

A01- visual area - **ANS** At the back of the occipital lobe is the visual area, this receives and processes visual information; damage to the left visual area can produce blindness in the right visual field and damage to the right visual area can cause blindness in the left visual field.

A01- auditory area - **ANS** The auditory area is located in the temporal lobe and is responsible for analyzing and processing acoustic information; information from the left ear primarily goes to the right hemisphere and vice versa

A03- supporting evidence - **ANS** P= supporting evidence from case study of Phineas Gage  
E= he experienced huge changes to personality as result of damage to frontal lobe

E= before accident he was calm and reserved after accident, he was rude, hostile and quick tempered

L= Demonstrates that there are localised areas of brain as the area that Gage damaged links to reasoning, control and mood.

A03- critique - **ANS** P= limitation- based on small and unique sample

E= eg. Phineas Gage survived a metre long tamping iron passing through skull

E= therefore, can't be sure if brain works according to this theory in all individuals
