North,2012-12-06 These proceedings are based upon the invited review papers and the research notes presented at the NATO Advanced Research Institute on Artificial Particle Beams in Space Plasma Studies held at Geilo Norway April 21 26 1981 In the last decade a number of research groups have employed artificial particle beams both from sounding rockets and satellites in order to study various ionospheric and magnetospheric phenomena However the

artificial particle beams used in this manner have given rise to a number of puzzling effects Thus instead of being just a probe for studying the ambient magnetosphere the artificial particle beams have presented a rich variety of plasma physics problems in particular various discharge phenomena which in themselves are worthy of a careful study The experimental studies in space using artificial particle beams have in turn given rise to both theoretical and laboratory studies In the laboratory experiments special attention has been paid to the problem of creating spacelike conditions in the vacuum chamber The theoretical work has addressed the question of beam plasma neutral interaction with emphasis on the wave generation and the modified energy distributions of the charged particles Numerical simulations have been used extensively With the advent of the Space Shuttle in which several artificial particle beam experiments are planned for the 1980 s there is a growing interest in such experiments Furthermore there is a need for coordinating these studies both in space and in the laboratory *Proceedings of the S.I.D. Schmidt, M.A. Aegerter, 1999-11-26 This conference provided a forum where researchers and industrialists working with glass and thin films could meet and discuss common complex problems Many apparently old fundamental procedures and processes are still under investigation due to their complexity In particular it is often so that experience dictates the operating conditions e.g. a special glass treatment or a special coating process rather than the understanding of the treatment or the process itself It was therefore the aim of this conference to discuss the various problems and to deepen the knowledge that is useful for industrial situations Based on the fundamental steps of glass fabrication modification and film deposition and property studies and the search for possible applications a wide range of glass and plastic treatments have been carefully considered in this book by experts working in the field
