Plastics Pricing Guide:

Distribution Data Guide, 1958 Plastics Design Handbook Marlene G. Rosato, D.V. Rosato, 2013-11-27 This book provides a simplified and practical approach to designing with plastics that fundamentally relates to the load temperature time and environment subjected to a product. It will provide the basic behaviors in what to consider when designing plastic products to meet performance and cost requirements. Important aspects are presented such as understanding the advantages of different shapes and how they influence designs. Information is concise, comprehensive and practical. Review includes designing with plastics based on material and process behaviors. As designing with any materials plastic, steel, aluminum, wood etc it is important to know their behaviors in order to maximize product performance to cost efficiency. Examples of many different designed products are reviewed. They range from toys to medical devices to cars to boats to underwater devices to containers to springs to pipes to buildings to aircraft to space craft. The reader's product to be designed can directly or indirectly be related to product design reviews in the book. Important are behaviors associated and interrelated with plastic materials thermoplastics, thermosets, elastomers, reinforced plastics etc and fabricating processes extrusion, injection molding, blow molding, forming, foaming, rotational molding etc. They are presented so that the technical or non-technical reader can readily understand the interrelationships.

Applied Plastics Engineering Handbook Myer Kutz, 2011-07-26 A practical reference for all plastics engineers who are seeking to answer a question, solve a problem, reduce a cost, improve a design or fabrication process or even venture into a new market. Applied Plastics Engineering Handbook covers both polymer basics helpful to bring readers quickly up to speed if they are not familiar with a particular area of plastics processing and recent developments enabling practitioners to discover which options best fit their requirements. Each chapter is an authoritative source of practical advice for engineers providing authoritative guidance from experts that will lead to cost savings and process improvements. Throughout the book the focus is on the engineering aspects of producing and using plastics. The properties of plastics are explained along with techniques for testing, measuring, enhancing and analyzing them. Practical introductions to both core topics and new developments make this work equally valuable for newly qualified plastics engineers seeking the practical rules of thumb they don't teach you in school and experienced practitioners evaluating new technologies or getting up to speed on a new field. The depth and detail of the coverage of new developments enables engineers and managers to gain knowledge of and evaluate new technologies and materials in key growth areas such as biomaterials and nanotechnology. This highly practical handbook is set apart from other references in the field being written by engineers for an audience of engineers and providing a wealth of real world examples, best practice guidance and rules of thumb.

provides practical and comprehensive coverage on how the performance of plastics is characterized during design property testing and failure analysis. The fundamental structure and properties of plastics are reviewed for general reference and detailed articles describe the important design factors, properties and failure mechanisms of plastics. The effects of composition, processing and structure are detailed in articles on the physical, chemical, thermal and mechanical properties. Other articles cover failure mechanisms such as crazing and fracture, impact loading, fatigue, wear, failures, moisture related failure, organic chemical related failure, photolytic degradation and microbial degradation. Characterization of plastics in failure analysis is described with additional articles on analysis of structure, surface analysis and fractography.

Plastic value chains John Baxter, Margareta Wahlstrom, Malin Zu Castell-Rüdenhausen, Anna Fråne, Malin Stare, Søren Løkke, Massimo Pizzol, 2014-06-10

This project identifies thousands of tonnes per annum of potential enhanced plastics recycling from Nordic electronic waste. Plastics recycling does not always feature prominently in waste treatment. Recycling is technologically viable although the market and economic landscape is challenging. Easy export markets for waste plastic are largely closed and near source treatment is increasingly needed. Concerns include issues of quality and worries about hazardous materials. Positively engaging electronics producers beyond the bare punitive requirements within extended responsibility schemes is a crucial driver for further developments. The report is part of the Nordic Prime Ministers overall green growth initiative. The Nordic Region leading in green growth. Read more in the web magazine Green Growth the Nordic Way at www.nordicway.org or at www.norden.org/greengrowth. The report for Part 2 will be published in December 2014.
