10. Answers may vary. Sample answer: Dating organic matter in the soil at the site of a fault excavation where a past disturbance was detected could lead to an accurate dating of that disturbance.
11. Answers may vary. Sample answer: The main assumption is that there were earthquakes and seismic activity at the site in the past. This assumption can be made because faults are known to be the sites of seismic activity and earthquakes over time.
12. Answers may vary. Sample answer: From such studies, recurring patterns of earthquake location, magnitude, and

timing might emerge. The idea that such patterns would continue into the future would allow predictions to be made.

13. Answers may vary. Sample answer: Disagree. One of the most powerful earthquakes in recorded history occurred in the middle of the continental United States at New Madrid, Missouri, far from any active plate boundaries.
14. Answers may vary. Sample answer: Agree. A building built on loose soil or loose rock is much more likely to be damaged in an earthquake than one built on solid ground. The loose soil and rock vibrate like jelly, causing the building to sway.
15. Answers may vary. Sample answer: Agree. The vibrations of earthquakes with deeper foci are usually relatively weak by the time they reach Earth's surface. The vibrations of earthquakes with shallow foci still have a lot of energy left when they reach the surface.
16. Answers may vary. Sample answer: Disagree. There are very few examples of foreshocks accurately predicting an earthquake within a timeframe that allowed people to take precautions.
17. Answers may vary. Sample answer: Disagree. A few simple rules can help to prevent death, injury, and property damage. People who live near active faults should have emergency food, radios, and lights on hand. During an earthquake, knowing what positions are safe and when to get to them can protect people. Being alert for hazards such as fires and downed power lines can help after an earthquake.
18. Answers may vary. Sample answer: The scientist has found a seismic gap. Because the gap is along a fault and hasn't had much recent activity, it is possible that this area may be the site of a future earthquake, as pressure builds up in the rocks.
19. Answers may vary. Sample answer: If the arrival times of the P waves and S
