

PASS OBJECTIVE 5

Objective 1: Earth has four main systems that interact: the atmosphere, the hydrosphere, the biosphere, and the geosphere.

PLATE TECTONICS**THE GEOSPHERE**

- The geosphere is in a constant state of motion that gives rise to movement of the continents.

- The unifying theory that explains how continental drift is possible is called plate tectonics, which was developed by geologists in the 1960s.
- Earth has four layers
 - Outermost layer is the crust.
 - Solid layer that flows slowly like putty is the mantle.
 - Outer core— molten metal above the inner core.
 - Inner core— dense iron core; very hot and dense.

Plate boundaries are edges where plates meet.

- Tension can pull plates apart, resulting in new lithosphere forming in the gaps.
- Colliding plates could cause mountains to form as rock crumbles and folds.
- Subduction occurs when a denser plate sinks underneath a less dense plate.
- Shearing causes faults and earthquakes as two plates slide past each other.

GEOLOGY—the study of planet Earth

- Geologists – scientists who study the forces that make and shape planet Earth
- Landforms – features formed in rock and soil by water, wind and waves

Studying surface changes

- Constructive forces – shape the surface by building up mountains and landmasses.
- Ex: land is made
- Destructive forces – slowly wear away mountains and other land features.
- Ex: land is destroyed

an excellent opportunity to discover the ways in which educators use research grounded pedagogical commitments in combination with their practical experiences to design and implement effective teacher professional development projects. Often missing from the literature are in depth explicit discussions of why and how educators choose to provide certain experiences and resources for the teachers with whom they work and the resulting outcomes. The first half of this book will enable science and environmental educators to share the nature and structure of large scale professional development projects while discussing the theoretical commitments that undergird their work. Many chapters will include temporal aspects that present the ways in which projects change over time in response to evaluative research and practical experience. In the second half of the book faculty and others whose focus is on national and international scales will share the ways in which they are working to meet the growing needs of teachers across the globe to incorporate geospatial technology into their science teaching. These efforts reflect the ongoing conversations in science education geography and the geospatial industry in ways that embody the opportunities and challenges inherent to this field. This edited book will serve to define the field of teacher professional development for teaching science using geospatial technology. As such it will identify short term and long term objectives for science environmental and geography educators involved in these efforts. As a result this book will provide a framework for future projects and research in this exciting and growing field.
