

What is SPAG and why is it important?

SPAG is Spelling and Grammar

Statistics for writing in 2012 showed that:

- almost 100,000 7-year-olds were below the expected level (17%)
- about 125,000 11-year-olds were below the expected level (23%)
- In the CBI's 2011 skills survey, more than 40% of employers said they were not satisfied with the basic literacy of school and college leavers.

For Primary Schools the decision was to place:

- a particular focus on spelling. For instance, there will be a list of words that all children should be able to spell by the end of primary school. There is currently no such list in the national curriculum
- a focus on grammar and punctuation. Children will be expected to understand how to use the subjunctive, and how to use the apostrophe correctly – for example, not using an apostrophe to indicate plurals such as “I went to buy some apple’s” nor using “it’s” as a possessive

Overrun Andrew Reeves, 2019-03-12 Intelligent investigative writing meets experiential journalism in this important look at one of North America's most voraciously invasive species Politicians ecologists and government wildlife officials are fighting a desperate rearguard action to halt the onward reach of Asian Carp four troublesome fish now within a handful of miles from entering Lake Michigan From aquaculture farms in Arkansas to the bayous of Louisiana from marshlands in Indiana to labs in Minnesota and from the Illinois River to the streets of Chicago where the last line of defense has been laid to keep Asian carp from reaching the Great Lakes Overrun takes us on a firsthand journey into the heart of a crisis Along the way environmental journalist Andrew Reeves discovers that saving the Great Lakes is only half the challenge The other is a radical scientific and political shift to rethink how we can bring back our degraded and ignored rivers and waterways and reconsider how we create equilibrium in a shrinking world With writing that is both urgent and wildly entertaining Andrew Reeves traces the carp's explosive spread throughout North America from an unknown import meant to tackle invasive water weeds to a continental scourge that bulldozes through everything in its path

Migration from Food Contact Materials L.L. Katan, 2012-12-06 The advent of sophisticated packaging materials and methods had stimulated the development of complex delivery systems from producer to consumer resulting in the availability of a wide range of products at an affordable price Contemporary distribution methods are not without problems however and specifically related to packaging is the possibility of migration the contamination of food by components of the materials in contact with it In this area both technology and regulations are well developed but basic science for a variety of reasons has tended to advance less quickly This book addresses the basic science of migration The editor has brought together a range of authors all of whom are acknowledged experts in their fields to provide a timely and concise overview of this important topic Covering basic science common materials and the major regulations in North America Europe and Japan this book will become a key information source in every library concerned with food technology Food technologists manufacturers of packaging and other food contact materials and regulatory professionals will all find this book an indispensable reference source

Mathematical Reflections Peter Hilton, Derek Holton, Jean Pedersen, 2012-12-06 Focusing Your Attention The purpose of this book is at least twofold First we want to show you what mathematics is what it is about and how it is done by those who do it successfully We are in fact trying to give effect to what we call in Section 9.3 our basic principle of mathematical instruction asserting that mathematics must be taught so that students comprehend how and why mathematics is done by those who do it successfully However our second purpose is quite as important We want to attract you and through you future readers to mathematics There is general agreement in the so called civilized world that mathematics is important but only a very small minority of those who make contact with mathematics in their early education would describe it as delightful We want to correct the false impression of mathematics as a combination of skill and drudgery and to reinforce for our readers a picture of mathematics as an exciting stimulating and engrossing activity as a world of accessible ideas rather than a world of incomprehensible techniques as an area of continued interest and investigation and not a set of procedures set in stone
