Control Grid Motion Estimation for Efficient Application of Optical Flow Christine M. Zwart, David Frakes, 2022-05-31
Motion estimation is a long standing cornerstone of image and video processing. Most notably motion estimation serves as the foundation for many of today's ubiquitous video coding standards including H.264. Motion estimators also play key roles in countless other applications that serve the consumer, industrial, biomedical, and military sectors. Of the many available motion estimation techniques, optical flow is widely regarded as most flexible. The flexibility offered by optical flow is particularly useful for complex registration and interpolation problems but comes at a considerable computational expense. As the volume and dimensionality of data that motion estimators are applied to continue to grow, that expense becomes more and more costly. Control grid motion estimators based on optical flow can accomplish motion estimation with flexibility similar to pure optical flow but at a fraction of the computational expense. Control grid methods also offer the added benefit of representing motion far more compactly than pure optical flow. This booklet explores control grid motion estimation and provides implementations of the approach that apply to data of multiple dimensionalities. Important current applications of control grid methods including registration and interpolation are also developed. Table of Contents: Introduction, Control Grid Interpolation, CGI Application of CGI to Registration Problems, Application of CGI to Interpolation Problems, Discussion and Conclusions. Computer Vision -- ACCV 2012 Kyoung Mu Lee, Yasuyuki Matsushita, James M. Rehg, Zhanyi Hu, 2013-03-27
The four volume set LNCS 7724-7727 constitutes the thoroughly refereed post-conference proceedings of the 11th Asian Conference on Computer Vision ACCV 2012 held in Daejeon, Korea, in November 2012. The total of 226 contributions presented in these volumes was carefully reviewed and selected from 869 submissions. The papers are organized in topical sections on: object detection, learning and matching, object recognition, feature representation and recognition, segmentation, grouping and classification, image representation, image and video retrieval, and medical image analysis, face and gesture analysis and recognition, optical flow and tracking, motion tracking and computational photography, video analysis and action recognition, shape reconstruction and optimization, shape from X and photometry, applications of computer vision, low level vision, and applications of computer vision. **Detection of Melt Ponds on Arctic Sea Ice with Optical Satellite Data** Anja Rösel, 2013-05-23
The Arctic sea ice is characterized by profound changes caused by surface melting processes and the formation of melt ponds in summer. Melt ponds contribute to the ice albedo feedback as they reduce the surface albedo of sea ice and hence accelerate the decay of Arctic sea ice. To quantify the melting of the entire Arctic sea ice, satellite-based observations are necessary. Due to different spectral properties of snow, ice, and water, theoretically multi-spectral optical sensors are necessary for the analysis of these distinct surface types. This study demonstrates the potential of optical sensors to detect melt ponds on Arctic sea ice. For the first time, an Arctic-wide multi-annual melt pond data set for the years 2000-2011 has been created and analyzed. Advances in Depth Images Analysis and Applications Xiaoyi Jiang, Olga Regina

African Greenhouse Gas Emission Inventories and Mitigation Options: Forestry, Land-Use Change, and Agriculture John F. Fitzgerald, Barbara V. Braatz, Sandra Brown, Augustine O. Isichei, Eric O. Odada, Robert J. Scholes, 2012-12-06 As atmospheric concentrations of greenhouse gases continue to increase so does the potential for atmospheric warming and associated climate change In an effort to address the threat of global climate change 155 countries signed the UN Framework Convention on Climate Change at the Earth Summit in Rio de Janeiro in June 1992 As of the first session of the Conference of the Parties 128 nations had ratified the Convention Among their other

commitments Parties to the Convention must develop and periodically update national inventories of net anthropogenic greenhouse gas emissions using comparable methodologies and must develop and implement national programs to mitigate greenhouse gas emissions To further the development of emission inventories and mitigation options within the African context 64 governmental and non governmental scientists and policy analysts from 23 nations gathered at a workshop near Johannesburg South Africa from 29 May to 2 June 1995 The workshop focused on forestry land use change and agriculture because these sectors not only are responsible for the majority of emissions from the continent and provide promising opportunities for emissions mitigation but also are a vital component of African economic growth and development This book presents the workshop s major conclusions and findings as well as individual papers that were prepared for the workshop each of which was peer reviewed and accepted for publication as part of the workshop process The papers cover four areas 1 issues are associated with data collection and emission factor determination 2 problems associated with applying the IPCC inventory methodologies in Africa 3 results of national inventory assessments in Africa and 4 possible emissions mitigation options and methods for evaluating their potential viability As the first book dedicated solely to greenhouse gas emissions and mitigation options in Africa this will be an invaluable resource to scientists policymakers and development specialists interested in global climate change and Africa
