Performance Analysis of Tall RCC Structure those are Earthquake Resistant Dr. Ashad Ullah Qureshi,2022-06-01

Earthquakes even though they occur rarely induce inertia force which is dynamic and complex. Moreover they are sometimes so devastating that it is worth going into depth of understanding them. The current work is one step towards understanding the complex effects of this dynamic force particularly on low rise RC structures which are found in almost all parts of the world. During the 2001 Bhuj earthquake in India major damage was observed in RC framed structures at Ahmedabad which were in the range of G 3 to G 7 storey. Most of the buildings were having a normal grid of 3m x 3m column spacing with a storey height of 3m. Hence the present work which is expected to act as a guideline for Civil and Structural Engineers in smaller towns and cities where expert advice may not be easily available is devoted to RC framed structures ranging from G 3 to G 7 storeys.
