

WHITE-RODGERS AUTOMATIC CONTROLS

- INSTRUCTIONS - **ASTRO*STAT** **THREE-WIRE ROOM THERMOSTAT** For Low Voltage Valves and Damper Motors

These thermostats have SPDT switch action and are specially designed for use with low voltage motorized controls such as White-Rodgers THREE-WIRE water valves, damper motors, and globe valves. They are heat-anticipated type thermostats which will produce scientific frequency of operation to assure a more uniform room temperature.

Both horizontal and vertical models are available, with either open (snap-action) or sealed (mercury) contacts, and with or without wall mounting plate.

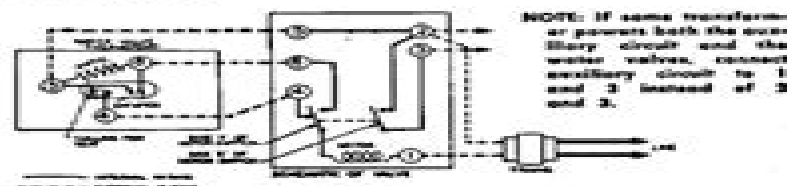

PRINCIPLE OF OPERATION

This schematic shows the valve in the closed position. As the thermostat calls for heat, the valve motor is energized and begins to open the valve. Just before the valve reaches the full-open position, side "B" of motor switch closes (providing a low voltage auxiliary circuit for starting burner and/or circulator), and side "A" of motor switch makes with contact 6 (completing a circuit through the thermostat anticipator).

A hold-in circuit (not shown) prevents valve from stopping halfway through opening cycle if thermostat is suddenly changed to satisfied position.

When the thermostat is satisfied, the valve motor is again energized. Just after the valve starts to close, side "B" of motor switch opens (breaking auxiliary circuit), while side "A" of motor switch makes with contact 4 just before valve fully closes.

Primarily used on heating applications, they may also be used on zoned cooling applications by reversing wires 4 and 6 on the thermostat, or on water valve or damper motor. They may also be used on zoned heating-cooling applications by using White-Rodgers special zoning sub-base, or by using reversing relays.

The hold-in circuit already mentioned also prevents valve from stopping halfway through closing cycle if thermostat is suddenly changed to unsatisfied position.

The valve draws current only when it is opening and closing.

NOTE: To check motor operation without thermostat connected, jumper 4 to 5 to open valve; 5 to 6 to close valve.

SELECTING LOCATION

The proper location of the room thermostat is most important to insure that it will provide a comfortable home temperature. Observe the following general rules when selecting a location:

1. Locate it about 5 ft. above the floor.
2. Install it on a partitioning wall, not on an outside wall.
3. Never expose it to direct light from lamps, sun, fireplaces, etc.

4. Avoid locations close to doors that lead outside, windows, or adjoining outside walls.
5. Avoid locations close to radiators, warm air registers, or in the direct path of heat from them.
6. Make sure there are no pipes or duct work in that part of the wall chosen for the thermostat location.

ROUTING WIRES TO LOCATION

1. Before drilling hole in wall at selected location, take up quarter round and drill a small guide hole for sighting. From basement, drill 3/4" hole in partition floor next to guide hole. (On basementless houses, drill 1/2" hole through ceiling above partition.)
2. Probe for obstructions in the partition. Then drill 1/2" hole through wall at selected location.

3. Through this hole in wall drop a light chain, or 6" chain attached to a strong cord, and snag cord with hooked wire from basement. (On basementless houses, drop cord from ceiling and snag it at the thermostat location.)
4. Attach thermostat cable to cord and pull cable through hole in wall so that 6" of cable protrudes.
