Mechanisms of Bluff Bodies and Road Vehicles Gino Sovran, 2012-12-06 These Proceedings contain the papers and oral discussions presented at the Symposium on AERODYNAMIC DRAG MECHANISMS of Bluff Bodies and Road Vehicles held at the General Motors Research Laboratories in Warren Michigan on September 27 and 28 1976 This international invitational Symposium was the twentieth in an annual series each one having been in a different technical discipline The Symposia provide a forum for areas of science and technology that are of timely interest to the Research Laboratories as well as the technical community at large and in which personnel of the Laboratories are actively involved The Symposia furnish an opportunity for the exchange of ideas and current knowledge between participating research specialists from educational industrial and governmental institutions and serve to stimulate future research activity The present world wide energy situation makes it highly desirable to reduce the force required to move road vehicles through the atmosphere A significant amount of the total energy consumed for transportation is expended in overcoming the aerodynamic resistance to motion of these vehicles Reductions in this aerodynamic drag can therefore have a large impact on ground transportation energy requirements Although aerodynamic development work on road vehicles has been performed for many years it has not been widely reported or accompanied by much basic research

Stereology and Stochastic Geometry John E. Hilliard, Lawrence Lawson, 2003-11-30 Somebody had to do it The Chinese speak of deep water wells called grandfather wells because they take three generations of diggers to complete Imagine the thought of such a well being abandoned incomplete by the third generation What a loss This book is like a grandfather well except that it has taken only two generations John Hilliard s and mine to finish When I saw his manuscript lying in a heap I decided that I must spend the time to put it and his notes into a publishable form Now it is done This book is mostly about performing spatial measurements through the statistical sampling of images it is a text on classical stereology as John Hilliard saw it His vision

of the subject was broad Consequently its title is broad too It presents this subject and some of its modern extensions from the classical perspective of the one of the founders of the field and my first advisor at Northwestern University John Hilliard There is nothing new in this book but much that may have been lost over time It rediscovers many useful discussions about such subjects as the variances of stereo logical measurements anisotropy etc It recovers some of the dialogues between John Hilliard and his students on such topics as fractals and Monte Carlo simulations It recaptures a little of John Hilliard's unique and subtle wit
