## Liquids in a U-tube

$$P_A = P_B = P_{atm}$$

$$P_A = P_B, P_C = P_D = P_{atm}$$

$$P_A = P_B$$

$$P_A + P_{atm} = P_X + P_{atm}$$

$$\rho_W g h_W = \rho_X g h_X$$

- a liquid with lower density  
→ height difference C & E will be greater

$$P_E = P_F, P_H = P_I = P_{atm}$$

$$P_E = P_F$$

$$P_Y + P_{atm} = P_M + P_Z + P_{atm}$$

$$\rho_Y g h_Y = \rho_M g h_M + \rho_Z g h_Z$$

## Find pressure of gas, $P_{gas}$

$$P_B = P_A$$

$$P_{Hg} + P_{atm} = P_{gas}$$

$$10 + 76 = P_{gas}$$

$$P_{gas} = 86 \text{ cm Hg}$$

$$P_E = P_D$$

$$P_{atm} = P_{Hg} + P_{gas}$$

$$76 = 10 + P_{gas}$$

$$P_{gas} = 66 \text{ cm Hg}$$

If  $P_{gas}$  remains:

- a thinner tube is used

→ height difference between C & E remains at 10 cm!

- a liquid with lower density

→ height difference between C & E greater!

*Is There a Temperature?* Tamás Sándor Biró,2011-02-03 Temperature and heat entropy and order or disorder are key classical concepts of physics These are challenged by searching matter under extreme conditions such as high relativistic energy strong acceleration or gravitation or unusual complexity due to long range correlations In our quest for quark matter all these conditions might occur simultaneously This book strongly motivated by the authors everyday research experiences in the field of high energy heavy ion collisions aims to bundle these challenges to modern physics The main topic is at the heart of thermodynamics the very concept of temperature its use and extensions New developments on this issue are both applications and foundations of non extensive statistics as well as concepts borrowed from gravity and string theory to describe the surprisingly statistical behavior of elementary matter at the highest accelerator energies of the world The reader will benefit from bringing these new developments in one book together by having the view of classical and modern concepts at the heart of physics across the problems related to high energy high acceleration and high complexity After reviewing the classical approaches the author discusses the dual gravity and non extensive statistical aspects of heavy ion collisions describing these experimental findings with the use of the concept of temperature     *Experiment Station Record* United States. **Optimal Shape Design for Elliptic Systems** O. Pironneau, 2012-12-06 The study of optimal shape design can be arrived at by asking the following question What is the best shape for a physical system This book is an applications oriented study of such physical systems in particular those which can be described by an elliptic partial differential equation and where the shape is found by the minimum of a single criterion function There are many problems of this type in high technology industries In fact most numerical simulations of physical systems are solved not to gain better understanding of the phenomena but to obtain better control and design Problems of this type are described in Chapter 2 Traditionally optimal shape design has been treated as a branch of the calculus of variations and more specifically of optimal control This subject interfaces with no less than four fields optimization optimal control partial differential equations PDEs and their numerical solutions this is the most difficult aspect of the subject Each of these fields is reviewed briefly PDEs Chapter 1 optimization Chapter 4 optimal control Chapter 5 and numerical methods Chapters 1 and 4      Science John Michels, 1899      **American National Standard Specification of Hearing Aid Characteristics** Acoustical Society of America.
