In this book experts examine competition from their own disciplinary perspectives. From economics to philosophy biology to education and psychology to politics the origins and applications of this paradigm are placed in historical context its mechanics are analyzed and its costs and benefits are assessed. The questions addressed in this book are important and varied. What is the historical genesis of the competition paradigm? How is competition manifest in our culture in religion politics economics sports business and education and are its effects always beneficial? What can we learn about the mechanics of competition from studying nature? Are humans naturally competitive or is it a learned behavior? How does competition affect our mental and physical well being? Is competition the best strategy for allocating finite planetary resources to an expanding human population? The book also engages a cooperative alternative and asks Is there an ethical tension between competition and cooperation? Why have cooperative models been undervalued and marginalized? Can cooperation increase innovation and efficiency?
