

1.0 CONSUMER DEMAND THEORY/ CONSUMER BEHAVIOR

Consumer behavior theory is concerned with how consumers make decisions about consumption of commodities given their prices and consumer's limited income so as to maximise utility.

WHO IS A CONSUMER?

A consumer is a decision making unit about consumption.

PRINCIPLES OF CONSUMERS DEMAND THEORY

- (a) Limited income (scarcity) necessitates choice.
- (b) Consumers make decisions purposefully. That is consumers are careful shoppers.
- (c) One good or service can be substituted for another.
- (d) Consumers make decisions without perfect information.
- (e) The law of diminishing marginal utility applies to consumer behavior.

THEORIES OF CONSUMER BEHAVIOR

a) Cardinal/Neo-classical utility theory

The theory holds that utility derived from consumption of a good or service is measurable subjectively using cardinal numbers (e.g. 1, 2, 3 ...) by units of measurements called utils.

Consumer equilibrium

Analysis of consumer equilibrium entails answering the question "How does a consumer allocate his money income among the various goods and services he/she consumes to maximize utility?"

The cardinal utility approach to consumer's equilibrium is based on the following assumption,

- Consumer is assumed to be rational.
- Consumer possesses perfect knowledge of obtainable utilities.
- Marginal utility of money is constant at whatever the level of income and each unit of money has utility equal to one.
- Units of commodities are homogeneous.
- Commodities are divisible.
- Utility is additive- If a basket of goods and services consumed by a consumer contains n items and their quantities are, $X_1, X_2, X_3, \dots, X_n$, the utility function of the consumer may be expressed as,

the utility function of the consumer may be expressed as,

$$U = f(X_1, X_2, X_3, \dots, X_n).$$

Given the utility function, the TU obtained from n items may be expressed as,

$$TU_n = U_1(X_1) + U_2(X_2) + U_3(X_3) + \dots + U_n(X_n).$$

-

Consumer Equilibrium-The General Case (Several Commodity Case)

Suppose a consumer consumes only two commodities one and two with quantities X_1 and X_2 .

The corresponding utility function is,

$$U = f(X_1, X_2) \quad [1]$$

To buy these commodities, the consumer will pay prices P_1 and P_2 for X_1 and X_2 respectively.

To maximise utility,
