Norms in Human Development Leslie Smith, Jacques Vonèche, 2006-08-17 The distinction between norms and facts is long standing in providing a challenge for psychology Norms exist as directives commands rules customs and ideals playing a constitutive role in human action and thought Norms lay down what has to be the necessary possible or impossible and what has to be done the obligatory the permitted or the forbidden and so go beyond the is of causality During two millennia norms made an essential contribution to accounts of the mind yet the twentieth century witnessed an abrupt change in the science of psychology where norms were typically either excluded altogether or reduced to causes The central argument in this book is twofold Firstly the approach in twentieth century psychology is flawed Secondly norms operating interdependently with causes can be investigated empirically and theoretically in cognition culture and morality Human development is a norm laden process
