World's First QuadDrive Optical Engine Allows More Rich Color Reproduction
SANYO projector engineering introduces their latest LCD Engine, called QuadDrive, which adds a Color Control Device to traditional 3LCD (red/green/blue) systems. The first projector to launch this innovative new QuadDrive engine is the PLC-XP200L. The additional color panel in the QuadDrive optical engine allows the PLC-XP200L to automatically control the amount of yellow light in the image, producing higher luminosity with improved color accuracy and clarity.

Achieves 7,000 Lumens of Brightness, the Best in its Class for Brighter Displays
The demand for even brighter projectors continues to come from the field as systems integrators are asked to install video displays in extremely large venues such as convention halls, conference rooms, auditoriums and houses of worship. However, as brightness levels increase on 3LCD projectors, there is a reverse effect in color reproduction. SANYO's innovative solution overcomes the limitations of 3LCD technology, opening the way for new projectors capable of extremely high luminosity without the trade off in color accuracy. Coupled with the impressive high contrast ratio of 2200:1, the XGA resolution (1024x768) PLC-XP200L is capable of generating clearer, richer and more beautiful images.

Active Maintenance Filter (AMF) for Easy Maintenance

Minimal maintenance and repair was essential for the PLC-XP200L, so it was outfitted with SANYO's exclusive Active Maintenance Filter (AMF). AMF is a single filter cartridge that contains the equivalent of 10 filters, lightening the burden of maintenance. It also has an airflow sensor to detect when the airflow is obstructed by dust. The AMF system automatically advances a clean section of filter when needed. When the last section of filter material becomes obstructed an on-screen graphic appears telling the user to change the cartridge. Each filter lasts approximately 10,000 hours with a cartridge lifecycle of about 2 years the filters are easy to replace due to the side loading access on the projector. To further increase reliability and performance, the PLC-XP200L uses SANYO's unique Durable Inorganic Optical System (DIOS).

Network Connectivity

An optional P.J.-Net Camera (POA-PN03C) and P.J. Master Software (POA-PJNM01) allow for control and administration of multiple projectors via a network. The user can monitor the actual picture and check projector status and control projector functions via any web browser. A warning notification will be automatically sent to the registered users' emails whenever the projector encounters problems.

Build in Mechanical Shutter

To prevent light from entering the presenter's eyes when in front of the projected image, a special mechanical shutter has been included behind the lens, open/close controllable with the remote control, which will temporarily darken the screen.
