Marret, J. O'Keefe, P. Osterloff, M. Pound, 2021-10-29 This long awaited book about non pollen palynomorphs NPPs aims to cover gaps in our knowledge of these abundant but understudied palynological remains NPPs such as fungal spores testate amoebae dinoflagellate cysts acritarchs and animal remains are routinely recovered from palynological preparations of marine or terrestrial material from Proterozoic to recent geological times This book gives the reader a comprehensive overview of the different types of NPPs with examples from diverse time periods and environments It provides guidance on sample preparation to maximize the

recovery of these NPPs detailed information on their diversity and ecological affinity clarification on the nomenclature and demonstrates their value as environmental indicators This volume will become the reference guide for any student academic or practitioner interested in everything else in their palynological preparations Mapping Psychopathology with fMRI and Effective Connectivity Analysis Baojuan Li,Adeel Razi,Karl J. Friston,2017-06-22 There is a growing appreciation that many psychiatric and neurological conditions can be understood as functional disconnection syndromes as reflected in aberrant functional integration and synaptic connectivity This Research Topic considers recent advances in understanding psychopathology in terms of aberrant effective connectivity as measured noninvasively using functional magnetic resonance imaging fMRI Recently there has been increasing interest in inferring directed connectivity effective connectivity from fMRI data Effective connectivity refers to the influence that one neural system exerts over another and quantifies the directed coupling among brain regions and how they change with pathophysiology Compared to functional connectivity effective connectivity allows one to understand how brain regions interact with each other in terms of context sensitive changes and directed coupling and therefore may provide mechanistic insights into the neural basis of psychopathology Established models of effective connectivity include psychophysiological interaction PPI structural equation modeling SEM and dynamic causal modelling DCM DCM is unique because it explicitly models the interaction among brain regions in terms of latent neuronal activity Moreover recent advances in DCM such as stochastic and spectral DCM make it possible to characterize the interaction between different brain regions both at rest and during a cognitive task **Straits and Seaways: Controls,**
