

Classifying Sharks using a Dichotomous Key

A classification system is a way of separating a large group of closely related organisms into smaller subgroups. With such a system, identification of an organism is easy. The scientific names of organisms are based on the classification systems of living organisms.

To classify an organism, scientists often use a **dichotomous key**. A **dichotomous key** is a listing of specific characteristics, such as structure and behavior, in such a way that an organism can be identified through a process of elimination.

In this investigation, it is expected that you:

- 1) Use a key to identify 14 shark families.
- 2) Study the method used in phrasing statements in a key.

Procedure

1. Read sentences 1A and 1B of the key. Then study shark 1 in figure A for the characteristics referred to in 1A and 1B. Follow the directions in these sentences and continue with this process until a family name for Shark 1 is determined.

For example, if the shark has an anal fin, and its body is not kite shaped, following the directions of 1A and go directly to sentence 2. If the shark lacks an anal fin or has a kite shaped body, follow the directions of 1B and go to sentence 10.

2. Continue this process with each shark until all animals have been identified. Write the family name on the line below each animal.
3. Use figure 1 as a guide to the anatomical features used in the key.

Carrier, John A. Musick, Michael R. Heithaus, 2012-04-09 Virtually every area of research associated with sharks and their relatives has been strongly impacted by the revolutionary growth in technology The questions we can now ask are very different than those reported even two decades ago Modern immunological and genetic techniques satellite telemetry and archival tagging modern phylogenetic analysis GIS and bomb dating are just a few of the techniques and procedures that have become a part of our investigative lexicon A modern synthesis of the biology of Chondrichthyans *Biology of Sharks and Their Relatives Second Edition* discusses significant advances in the development and application of new molecular techniques to the understanding of the phylogenetic relationships among and between these groups The book considers the effect of global changes on the status of sharks and their relatives and how advances in technology and analytical techniques have changed not only how we approach problem solving and scientific investigations but how we formulate questions The book also introduces applications of new and novel laboratory devices techniques and field instruments This second edition of the award winning and groundbreaking original exploration of the fundamental elements of the taxonomy systematics physiology and ecology of sharks skates rays and chimera presents cohesive and integrated coverage of key topics and discusses technological advances used in modern shark research Offering a well rounded picture for students and researchers and far above competitors in scope and research this new volume holds a wealth of data on the current status of Chondrichthyan research and provides the basis and springboard for original research Cover photo by Justin Gilligan **Sharks of the Order Carcharhiniformes** Leonard J. V. Compagno, 1988 This book is a general review taxonomic revision and phylogenetic analysis of the carcharhinoids the largest group of living sharks which comprises almost 60 percent or 200 of known shark species Students of shark biology have been hampered by the lack of just such a comprehensive and rigorous account of shark morphology With this work L J V Compagno offers not only the most comprehensive and detailed account of this important but neglected group to date but also one of the most comprehensive modern anatomical and phylogenetic studies on cartilaginous fishes available It will become an essential reference not only for researchers on carcharhinoids but also for those who study other families of sharks and for paleontologists interested in this ancient group of fishes The book begins with a general account of carcharhinoid sharks Chapters Two through Eleven include detailed discussions of character systems used in taxonomic and phylogenetic analysis of carcharhinoids Chapter Twelve defines the Order Carcharhiniformes lists its families and includes a taxonomic key to the families Chapters Thirteen through Twenty review the eight carcharhinoid families and Chapter Twenty One is an extended discussion of the phylogeny of carcharhinoids with cladistic analysis of taxa at various levels

Immunobiology of the Shark Sylvia L. Smith, Robert B. Sim, Martin F. Flajnik, 2014-12-04 Immunity studies in sharks over the past three decades have produced some remarkable discoveries. If one message rings true, it is that alternative animal model systems such as sharks and their relatives have contributed very substantially to a better understanding of the development and evolution of our own immune system. *Immunobiology of the Shark* describes the cellular, genetic, and molecular specifics of immune systems in sharks. Diverse approaches were employed to study the immunobiology of the shark, from basic microscopic observations to detailed genome annotation. The book also raises a series of fascinating questions which can be addressed experimentally using today's technology. This book will be a valuable resource for mainstream immunologists, comparative immunologists, geneticists, ecologists, evolutionary biologists, and investigators engaged in shark research. The book also aims to illustrate the magnificence of these animals as model systems and underscores the importance of their study to further understand their complex and often enigmatic biology.
