Mobile Telecommunications in a High-Speed World Peter Curwen, Jason Whalley, 2016-07-22 *Mobile Telecommunications in a High Speed World* tells the story of 3G and higher speed mobile communication technologies. Over ten years have passed since the first third generation 3G licences were awarded following debates about the merits of auctions versus beauty contests; then nothing much happened. More licences were issued, a few roll outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case but in the meantime there have been massive developments in terms of the number of licences and launches worldwide in the range of services that can be accessed in the range of devices that can be used to access them in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled largely on the Internet but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong. Here Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators as well as the social consequences of the spread of 3G. They examine the role of new entry upon competition and present analysis of the main operators involved in the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up to date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. *Mobile Telecommunications in a High Speed World* will serve the needs of students, academics and those involved or contemplating involvement with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.

Habit Neale Martin, 2008 80% of new products fail. Billions of advertising dollars are wasted every year. Even satisfied customers abandon companies at the drop of a hat. How can this be? How can so many brilliant marketers and product developers be failing so thoroughly? Here's how they've focused their vast resources almost exclusively on the conscious mind but it's the unconscious mind that controls 95% of human behavior. In *Habit*, Dr Neale Martin presents powerful new research that reveals how the mind actually works and explains in practical detail the implications of this new science for marketers and product developers. You'll learn why 50 years of

marketing theory is deeply flawed how your customers unconscious minds thwart your marketing campaigns and how to identify what customers really want when they don't even know Martin explains how customer behavior actually changes the mind's neural connections and how companies can leverage this fact by refocusing on behavior not on attitudes and beliefs He offers a complete process for working with customers unconscious and conscious minds together to become your customer's habit not just their choice You'll even learn how to revamp organizational structures that undermine the promotion of customer habits Using Martin's techniques you can not only avoid marketing and product failures you can finally achieve the twin holy grails of marketing higher customer retention and greater long term profitability **Public**
