Administrator and IT Architect **Architecting and Deploying DB2 with BLU Acceleration** Whei-Jen Chen, Brigitte Blaser, Marco Bonezzi, Polly Lau, Jean Cristie Pacanaro, Martin Schlegel, Ayesha Zaka, Alexander Zietlow, IBM Redbooks, 2015-05-11 IBM DB2 with BLU Acceleration is a revolutionary technology that is delivered in DB2 for Linux UNIX and Windows Release 10.5 BLU Acceleration delivers breakthrough performance improvements for analytic queries by using dynamic in memory columnar technologies. Different from other vendor solutions, BLU Acceleration allows the unified computing of OLTP and analytics data inside a single database, therefore removing barriers and accelerating results for users. With observed hundredfold improvement in query response time, BLU Acceleration provides a simple, fast, and easy-to-use solution for the needs of today's organizations. Quick access to business answers can be used to gain a competitive edge, lower costs, and more. This IBM Redbooks publication introduces the concepts of DB2 with BLU Acceleration. It discusses the steps to move from a relational database to using BLU Acceleration, optimizing BLU usage, and deploying BLU into existing analytic solutions today, with an example of IBM Cognos. This book also describes integration of DB2 with BLU Acceleration into SAP Business Warehouse, SAP BW, and SAP's near line storage solution on DB2. This publication is intended to be helpful to a wide-ranging audience, including those readers who want to understand the technologies and those who have planning, deployment, and support responsibilities.

Implementation Best Practices for IBM DB2 BLU Acceleration with SAP BW on IBM Power Systems Dino Quintero, Yukiko Itaya, Speitim Velic, Adriana Melges, Quintanilha Weingart, IBM Redbooks, 2015-05-11 BLU Acceleration is a new technology that has been developed by IBM and integrated directly into the IBM DB2 engine. BLU Acceleration is a new storage engine along with integrated run time directly into the core DB2 engine to support the storage and analysis of column-organized tables. The BLU Acceleration processing is parallel to the regular row-based table processing found in the DB2 engine. This is not a bolt-on technology; nor is it a separate analytic engine that sits outside of DB2. Much like when IBM added XML data as a first-class object within the database along with all the storage and processing enhancements that came with XML, now IBM has added column-organized tables directly into the storage and processing engine of DB2. This IBM Redbooks publication shows examples on an IBM Power Systems™ entry server as a starter configuration for small organizations and build larger configurations with IBM Power Systems larger servers. This publication takes you through how to build a BLU Acceleration solution on IBM POWER having SAP Landscape integrated to it. This publication implements SAP NetWeaver Business Warehouse Systems as part of the scenario using another DB2 feature called Near Line Storage (NLS) on IBM POWER virtualization features to develop and document best recommendation scenarios. This publication is targeted towards technical professionals, DBAs, data architects, consultants, technical support staff, and IT specialists responsible for delivering cost-effective data management solutions to provide the best system configuration for their clients' data analytics on Power Systems.
