SFPE Guide to Human Behavior in Fire Society of Fire Protection Engineers, 2018-11-14 This single resource for the fire safety community distills the most relevant and useful science and research into a consensus based guide whose key factors and considerations impact the response and behavior of occupants of a building during a fire event The Second Edition of SFPE's Engineering Guide Human Behavior in Fire provides a common introduction to this field for the broad fire safety community fire protection engineers fire safety engineers human behavior scientists researchers design professionals and code authorities The public benefits from consistent understanding of the factors that influence the responses and behaviors of people when threatened by fire and the application of reliable methodologies to evaluate and estimate human response in buildings and structures This Guide also aims to lessen the uncertainties in the people components of fire safety and allow for more refined analysis with less reliance on arbitrary safety factors As with fire science in general our knowledge of human behavior in fire is growing but is still characterized by uncertainties that are traceable to both limitation in the science and unfamiliarity by the user communities The concepts for development of evacuation scenarios for performance based designs and the technical methods to estimate evacuation response are reviewed with consideration to the limitation and uncertainty of the methods This Guide identifies both quantitative and qualitative

information that constitutes important consideration prior to developing safety factors exercising engineering judgment and using evacuation models in the practical design of buildings and evacuation procedures Besides updating material in the First Edition this revision includes new information on Incapacitating Effects of Fire Effluent Toxicity Analysis Methods Occupant Behavior Scenarios Movement Models and Behavioral Models Egress Model Selection Verification and Validation Estimation of Uncertainty and Use of Safety Factors Enhancing Human Response to Emergencies Notification of Messaging The prediction of human behavior during a fire emergency is one of the most challenging areas of fire protection engineering Yet understanding and considering human factors is essential to designing effective evacuation systems ensuring safety during a fire and related emergency events and accurately reconstructing a fire *User's Manual for NFPA 921* National Fire Protection Association, Iaai, 2006-03 Fire Investigator

Use of Services for Family Planning and Infertility, United States, 1982 Gerry E. Hendershot, Marjorie C. Horn, William D. Mosher, 1988 The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth NSFG conducted by the National Center for Health Statistics Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44 A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date Overall 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years There were no statistically significant differences between white 79% black 75% or Hispanic 77% wives or between the 2 income groups The 1982 survey questions were more comprehensive than those of earlier cycles of the survey The annual rate of visits for family planning services in 1982 was 1077 visits 1000 women Teenagers had the highest annual visit rate 1581 1000 of any age

group for all sources of family planning services combined Visit rates declined sharply with age from 1447 at ages 15 24 to 479 at ages 35 44 Similar declines with age also were found in the visit rates for white and black women separately Nevertheless the annual visit rate for black women 1334 1000 was significantly higher than that for white women 1033 The highest overall visit rate was for black women 15 19 years of age 1867 1000 Nearly 2 3 of all family planning visits were to private medical sources Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources as did black women age 15 24 White women age 20 and older had higher visit rates to private medical services than to clinics Never married women had higher visit rates to clinics than currently or formerly married women Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview During the 3 years before interview about 1 9 million women had infertility visits For all ever married women as well as for white and black women separately infertility services were more likely to be secured from private medical sources than from clinics The survey design reliability of the estimates and the terms used are explained in the technical notes
