Pulmonary Heart Disease L.J. Rubin, 2012-12-06

Responsibility for the diagnosis and management of disorders of the pulmonary circulation has become the shared domain of the pulmonologist cardiologist surgeon radiologist pathologist and perhaps most important of all the internist It is the general internist who is most likely to care for the majority of patients with lung diseases that secondarily give rise to pulmonary heart disease and it is the internist who will first evaluate the patient with primary pulmonary hypertension or recurrent pulmonary thromboembolism who presents with nonspecific complaints and may manifest subtle and nondiagnostic findings on preliminary evaluation The burgeoning medical literature concerning aspects of the pulmonary circulation both clinical and investigative is a reflection of the reawakening of great interest in this field and has led to many new developments both in our understanding of cardiopulmonary pathophysiology and in the diagnosis and treatment of pulmonary vascular diseases This book is an attempt to provide the clinician with a comprehensive overview of pulmonary heart disease from the perspective of experts representing a variety of disciplines It is intended to be thorough yet clinically

relevant Individuals familiar with some facets of pulmonary heart disease may gain insight into other aspects of this condition whereas those unfamiliar with this disorder may find this work useful as a general reference or as a resource to address a specific question

**Oxford Desk Reference: Respiratory Medicine** Nick Maskell, Ann Millar, 2009-05-14 In the era of evidence based medicine clinicians draw upon a vast resource of research based evidence to guide their practice However finding this information is not always easy particularly when it is most needed In the case of respiratory medicine which covers more than 40 individual conditions the research based evidence may be limited and or disproportionate to the incidence of the condition Guidelines are available but difficult and time consuming to find This book is designed to overcome this problem Many of the key recommendations to be found in current evidence based guidelines are presented in a uniform and accessible format The same format has been used for expert opinion on best practice where the evidence base is limited The design of this book makes locating the information needed both quick and simple and the succinct yet easy to read nature of the text means that key points can be reviewed and assimilated rapidly The text is enhanced by a number of summary boxes and tables for quick reference to the key points covered in the narrative A large number of these sections also have radiological images illustrating the relevant abnormalities Written by experts in their field this book presents a succinct overview based on both best practice and available research evidence

**Textbook of Pulmonary and Critical Care Medicine Vols 1 and 2** SK Jindal, PS Shankar, Suhail Raoof, Dheeraj Gupta, 2011-01-31 This book published in two volumes Both volume divided in twenty three sections all sections and chapters are most important The Textbook of Pulmonary and Critical Care Medicine also offers a unique exposure to the problems in many parts of the world Tuberculosis the number one treatable condition has been extensively covered and special topics such as multi drug resistance directly observed therapy TB prevention nonpharmacologic approaches and extapulmonary tuberculosis are particularly relevant Many countries are facing a growing burden of noncommunicable respiratory diseases They have become the second leading cause of death after injuries and their impact on indirect costs such as loss of work and home productivity is enormous These problems are addressed and measures of prevention such as smoking cessation are included Other special challenges including topics such as indoor and outdoor air pollution climate change poisoning with pesticides snakebite toxicity pulmonary manifestations of tropical infections and industrial accidents such as the tragedy seen in Bhopal Madhya Pradesh with methyl isocyanate have been well covered However as globalization flattens the playing field and countries leap to industrialization cultural beliefs natural resources climate and geography have slowed the pace of development in many parts of the world Poverty leads to malnutrition homelessness lack of education and poor access to health care Overcrowded cities and rural underdevelopment are other challenges that impact health in the various parts of the world Moreover epidemics of HIV drug abuse and smoking addiction take a greater toll on the population Yes the world is flat but the terrain is filled with mountains and valleys and local problems demand local solutions And these local problems need to be explored and

presented with a scholarly perspective The Textbook of Pulmonary and Critical Care Medicine has successfully incorporated these sociodemographic factors into the subject matter The text is well written and the chapters are carefully referenced with subjects found in all traditional pulmonary and critical care textbooks e g airway diseases interstitial lung disease pleural disease pulmonary neoplasia pulmonary infection sleep and critical care There are several nontraditional sections as well that are practical and especially helpful to the practicing physician These include a section on the symptom approach to lung disease an overview of the pharmacologic agents used to treat lung disease and a comprehensive review of methods in lung diagnosis from the simple history and physical examination to the latest complex tools of interventional pulmonology The textbook is especially unique because of the abundance of illustrations flow charts and tables There are many radiographic and pathologic reproductions that are especially helpful
