Physics of Negative Refraction and Negative Index Materials Clifford M. Krowne, Yong Zhang, 2007-08-14 This book deals with the subject of optical and electronic negative refraction NR and negative index materials NIM Diverse approaches for achieving NR and NIM are covered such as using photonic crystals phononic crystals split ring resonators SRRs and continuous media focusing of waves guided wave behavior and nonlinear effects It is perhaps the most comprehensive book on the new class of negative refraction materials covering all aspects of negative refraction and negative index materials

Fundamentals of Mechanics of Robotic Manipulation Marco Ceccarelli, 2022-03-30 The book explores the fundamental issues of robot mechanics for both the analysis and design of manipulations manipulators and grippers taking into account a central role of mechanics and mechanical structures in the development and use of robotic systems with mechatronic design It examines manipulations that can be performed by robotic manipulators The contents of the book are kept at a fairly practical level with the aim to teach how to model simulate and operate robotic mechanical systems The chapters have been written and organized in a way that they can be read even separately so that they can be used separately for different courses and purposes The introduction illustrates motivations and historical developments of robotic mechanical systems Chapter 2 describes the analysis and design of manipulations by automatic machinery and robots chapter 3 deals with the mechanics of serial chain manipulators with the aim to propose algorithms for analysis simulation and design purposes chapter 4 introduces the mechanics of parallel manipulators chapter 5 addresses the attention to mechanical grippers and related mechanics of grasping

The new edition of an introduction to computer programming within the context of the visual arts using the open source programming language Processing thoroughly updated throughout The visual arts are rapidly changing as media moves into the web mobile devices and architecture When designers and artists learn the basics of writing software they develop a new form of literacy that enables them to create new media for the present and to imagine future media that are beyond the capacities of current software tools This book introduces this new literacy by teaching computer programming within the context of the visual arts It offers a comprehensive reference and text for Processing www.processing.org an open source programming language that can be used by students artists designers architects researchers and anyone who wants to program images animation and interactivity Written by Processing's cofounders the book offers a definitive reference for students and professionals Tutorial chapters make up the bulk of the book advanced professional projects from such domains as animation performance and installation are discussed in interviews with their creators This second edition has been thoroughly updated It is the first book to offer in depth coverage of Processing 2.0 and 3.0 and all examples have been updated for the new syntax Every chapter has been revised and new chapters introduce new ways to work with data and geometry New synthesis chapters offer discussion and worked examples of such topics as sketching with code modularity and algorithms New interviews have been added that cover a wider range of projects Extension chapters are now offered online so they can be updated to keep pace with technological developments in such fields as computer vision and electronics Interviews SUE C Larry Cuba Mark Hansen Lynn Hershman Leeson J rg Lehn LettError Golan Levin and Zachary Lieberman Benjamin Maus Manfred Mohr Ash Nehru Josh On Bob Sabiston Jennifer Steinkamp Jared Tarbell Steph Thirion Robert Winter **Mechanized Tunnelling in Urban Areas** Vittorio Guglielmetti, Piergiorgio Grasso, Ashraf Mahtab, Shulin

Xu, 2008-01-07 Internationally the mechanized excavation of tunnels has intensified in the last two decades as the number of tunnels being constructed for subways and railway underpasses increases The subject of mechanized tunnelling in urban areas has not previously received the attention that it deserves despite there being specific hazards associated with the construction of tunnels in metropolitan areas including poor ground conditions water tables higher than the level of tunnels and subsidence leading to damage to the existing structures on the surface The application of technologies for achieving the stability of the tunnel and for minimizing surface settlement is described in this book Accurate characterization of the ground rigorous assessment and management of risk from design to maintenance the correct choice of a tunnel boring machine and a plan for the advancement of the tunnel specific excavation procedures and real time monitoring of excavation parameters are all discussed in this thorough work 19th Natural Philosophy Alliance Proceedings Greg Volk, 2012-07-14 The Natural Philosophy Alliance NPA sponsors regular international conferences for presenting high quality papers discussing aspects of

philosophy in the sciences Many papers offer challenges to accepted orthodoxy in the sciences especially in physics Everything from the micro physics of quantum mechanics to the macro physics of cosmology is entertained Though the main interest of the NPA is in challenging orthodoxy in the sciences it will also feature papers defending such orthodoxy Our ultimate propose is to enable participants to articulate their own understanding of the truth All papers are reviewed by society officers and sometimes by other members before presentation in conferences and they are edit sometimes very significantly prior to publication in the Proceedings of the NPA

Learning Processing Daniel Shiffman,2009-04-17 The free open source Processing programming language environment was created at MIT for people who want to develop images animation and sound Based on the ubiquitous Java it provides an alternative to daunting languages and expensive proprietary software This book gives graphic designers artists and illustrators of all stripes a jump start to working with processing by providing detailed information on the basic principles of programming with the language followed by careful step by step explanations of select advanced techniques The author teaches computer graphics at NYU s Tisch School of the Arts and his book has been developed with a supportive learning experience at its core From algorithms and data mining to rendering and debugging it teaches object oriented programming from the ground up within the fascinating context of interactive visual media Previously announced as Pixels Patterns and Processing A guided journey from the very basics of computer programming through to creating custom interactive 3D graphics Step by step examples approachable language exercises and LOTS of sample code support the reader s learning curve Includes lessons on how to program live video animated images and interactive sound

Specification and Development of Interactive Systems Manfred Broy,Ketil Stølen,2012-12-06 This book presents a fundamental mathematical and logical approach to soft ware and systems engineering Considering the large number of books de scribing mathematical approaches to program development it is important to explain what we consider to be the specific contribution of our book to identify our goals and to characterize our intended target audience Most books dealing with the mathematics and logics of programming and system development are mainly devoted to programming in the small This is in contrast to our book where the emphasis is on modular system development with the help of component specifications with precisely identified interfaces and refinement concepts Our book aims at systems development carried out in a systematic way based on a clear mathematical theory We do not claim that this book presents a full blown engineering method In fact this is certainly not a book for the application driven software engi neer looking for a practical method for

system development in an industrial context It is much rather a book for the computer scientist and the scientifically interested engineer who looks for basic principles of system development and moreover its mathematical foundations It is also a book for method builders interested in a proper mathematical foundation on which they can build a practical development method and industrial strength support tools Performance Tests for Hot Mix Asphalt (HMA) Including Fundamental and Empirical Procedures Louay Nadhim Mohammad, 2006 Modern Algebra, 9e Surjeet Singh & Qazi Zameeruddin, The book starts from set theory and covers an advanced course in group theory and ring theory A detailed study of field theory and its application to geometry is undertaken after a brief and concise account of vector spaces and linear transformations One of the chapters discusses rings with chain conditions and Hilbert's basis theorem The book is replete with solved examples to provide ample opportunity to students to comprehend the subject **Investigation of Gage-placement Effects on a Stress Gage Embedded in Grout** John Qua Ehrgott (Jr.), 1973 The report documents a study conducted on the Gulf Radiation Technology GRT piezoelectric stress gage in support of the Diamond Mine Event at the Nevada Test Site NTS The gage was first calibrated in oil and then embedded in an NTS grout and tested under conditions of uniaxial strain The results of these tests indicated a slightly nonlinear output of the gage under hydrostatic loadings and an under registration of the gage when embedded in the grout Limited uniaxial strain tests were concurrently conducted on the grout mix The property information from these tests was used as input to the WESTES finite element code in which the test boundary conditions were simulated to analytically investigate behavior of the grout specimen with and without an embedded inclusion or gage The calculated results indicated that the contact interface between the gage and the grout had the greatest effect on gage performance Author De rerum natura Titus Lucretius Carus, 1891 **A Process Algebraic Approach to Software Architecture Design** Alessandro Aldini, Marco Bernardo, Flavio Corradini, 2010-03-14 In the old formal methods in computer science concurrency theory is receiving a constantly increasing interest This is especially true for process algebra Although it had been originally conceived as a means for reasoning about the semantics of current programs process algebraic formalisms like CCS CSP ACP calculus and their extensions see e.g. [154, 119, 112, 22, 155, 181, 30] were soon used also for comprehending functional and nonfunctional aspects of the behavior of communicating concurrent systems The scientific impact of process calculi and behavioral equivalences at the base of process algebra is witnessed not only by a very rich literature It is in fact worth mentioning the standardization procedure that led to the development of the process algebraic language LOTOS [49] as well as the implementation of several modeling and analysis tools based on process algebra like CWB [70] and CADP [93] some of which have been used in industrial case studies Furthermore process calculi and behavioral equivalences are by now adopted in university level courses to teach the foundations of concurrent programming as well as the model driven design of concurrent distributed and mobile systems Nevertheless after 30 years since its introduction process algebra is rarely adopted in the practice of software development

On the one hand its technicalities often obfuscate the way in which systems are modeled. As an example if a process term comprises numerous occurrences of the parallel composition operator it is hard to understand the communicationscheme among the various subterms. On the other hand process algebra is perceived as being difficult to learn and use by practitioners as it is not close enough to the way they think of software systems.

Macro- and Micro-Mechanics of High Velocity Deformation and Fracture Kozo Kawata, Jumpei Shioiri, 2012-12-06 The IUTAM Symposium on Macro and Micro Mechanics of High Velocity Deformation and Fracture MMMHVDF August 12-15 1985 was held at Science Council of Japan under the sponsorship of IUTAM Science Council of Japan Japan Society for the Promotion of Science The Commemorative Association for the Japan World Exposition 1970 and The Japan Society for Aeronautical and Space Sciences The proposal of the symposium was accepted by the General Assembly of IUTAM and the scientists mentioned below were appointed by the Bureau of IUTAM to serve as members of the Scientific Committee The main object of the Symposium was to make a general survey of recent developments in the research of high velocity solid mechanics and to explore further new ideas for dealing with unsettled problems of fundamental nature as well as of practical importance The subjects covered theoretical experimental and numerical fields in macro and micro mechanics associated with high velocity deformation and fracture in solids covering metals ceramics polymers and composites
