

Global and Southern African Perspectives

2nd Edition

Operations Management

Managing operations is important, exciting and challenging. It is also critical for successful performance within the organisation, both in the public and the private sectors. This updated second edition highlights the strategic context in which operations managers work and provides a comprehensive introduction to operations management for students who wish to understand its nature and practice in the field. It will benefit a range of students and practitioners, undergraduates in business studies, MBA students and post-graduate students in other specialist Master disciplines. It can also help practising managers who are furthering their studies.

The authors bring to life the study of operations management with 100 local and international case studies. There is a major focus on Southern African examples of operations management in practice, as well as providing critical commentaries on areas of academic and current social debate.

Students will engage with challenging questions: How does an organisation ...

- create and deliver products at lower cost and higher value?
- meet the challenges posed by changes in customer preferences, internet-based technologies and global supply networks?
- promote creativity, manage knowledge and innovation, and encourage social responsibility?
- meet the service delivery requirements of customers and clients on a growing African continent?

Success Factors of Regional Strategies for Multinational Corporations Patrick Heinecke, 2011-01-15 This work examines the factors that drive the success of Multinational Corporations (MNCs) in their pursuit of regional strategies. The author develops a comprehensive regional success factor model by which the effects of regional management autonomy and regional product and service adaptation on the regional success of MNCs as well as the interaction effects of regional orientation and inter regional distance are investigated. The model is evaluated by means of the partial least squares (PLS) method on the basis of a survey based inquiry of the Fortune Global 500 firms with success indicator data for a period of nine years. The findings highlight the importance of considering the different degrees of contextual influence in the design of regional strategies where low degrees of regional management autonomy and high levels of regional product service adaptation are found to be appropriate for MNCs to be regionally successful.
