**Functional Imaging and Modeling of the Heart** Alejandro F. Frangi, Petia I. Radeva, Andres Santos, Monica Hernandez, 2005-06-13

The 1st and 2nd International Conferences on Functional Imaging and Modelling of the Heart FIMH were held in Helsinki Finland in November 2001 and in Lyon France in June 2003 These meetings were born through a fruitful scientific collaboration between France and Finland that outreached to other groups and led to the start of this biennial event The FIMH conference was the first attempt to agglutinate researchers from several complementary but often isolated fields cardiac imaging signal and image processing applied mathematics and physics biomedical engineering and computer science cardiology radiology biology and physiology In the first two editions the conference received an enthusiastic acceptance by experts of all these communities FIMH was originally started as a European event and has increasingly attracted more and more people from the US and Asia This edition of FIMH received the largest number of submissions so far with a result of 47 papers being accepted as either oral presentations or posters There were a number of submissions from non EU institutions which confirms the growing interest in this series of meetings All papers were reviewed by up to four reviewers The accepted contributions were organized into 8 oral sessions and 3 poster sessions complemented by a number of invited talks This year we tried to allocate

as many papers as possible as oral presentations to facilitate more active participation and to stimulate multidisciplinary discussions Functional Imaging and Modeling of the Heart ,2005 Real-Time 3D Echocardiography for Congenital Heart Disease Shuping Ge,2013-10-31 This project is intended for the first teaching text in this field It will describe the new concepts methodology and application of real time 3 dimensional echocardiography for congenital heart diseases It will concentrate on a step wise approach for each and every major CHD Congenital heart disease CHD is a major cause of mortality and morbidity in young infants This monograph will be the first text to focus on a relatively new technology i e real time 3 dimensional echocardiography and its history technology approaches normal study and clinical application in a variety of congenital heart diseases from fetuses to adults This technology first became available around the turn of this century In the last few years this field has seen rapid progress in technological advancement and expanding current and potential clinical applications This technology is particularly suited for congenital heart disease in which there is a clear need for more clear and accurate delineation of the congenital heart defects from a 3 dimensional perspective for diagnosis assessment and prognosis of these defects Although there are two monographs for real time 3D echocardiography adults with heart diseases Shiota and Nanda mostly coronary heart disease valve heart disease etc there is no published monograph related to real time 3D echocardiography in children with congenital heart disease This project will fill a gap for potentially a diverse audience including pediatric cardiologists congenital heart surgeons anesthesiologists high risk Ob Gyn specialists neonatologists adult congenital disease specialists pediatric residents fellows nurses physician assistants and other health care professionals

**Right Ventricular Dysfunction** Attila Kovacs,2024-01-24 Right ventricular RV function has proven to be a prognostic factor in heart failure with reduced and preserved left ventricular ejection fraction or in pulmonary arterial hypertension RV function is also a cornerstone in managing relatively novel clinical issues such as mechanical circulatory support devices or grown up congenital heart diseases Despite the notable amount of circumferentially oriented myofibers in the subepicardial layer of the RV myocardium the non longitudinal motion directions are often neglected in the everyday assessment of RV function The complex RV contraction pattern however incorporates distinct mechanical components 3D imaging may enable

capturing subtle RV dysfunction which can be undetectable by conventional methods Novel 3D based parameters may allow an earlier diagnosis and better risk stratification of numerous cardiac and primarily non cardiac diseases

Insights into Mitral Valve Prolapse: From biology to future perspectives of treatment, passing through diagnostic tools, surgical techniques and transcatheter options Christophe Tribouilloy, Marco Zanobini, Claudia Maria Loardi, 2023-09-11 Mitral valve prolapse MVP consisting of an abnormal protrusion of mitral leaflets into the left atrium is the main cause of severe mitral regurgitation and it often requires surgical or interventional correction. It mainly represents a typical adult disease with an average prevalence in industrialized countries ranging from 2 to 8% but even the pediatric population may be affected showing specific features concerning both anatomy and treatment. Although its existence and clinical characteristics are known for several decades every aspect of this pathological condition is in continuous evolution being the subject of biologists, cardiologists and surgeons' active research. The aim of the present Research Topic is to address the MVP entity in its completeness trying to describe all actual knowledge concerning molecular mechanisms, different clinical presentations, fibroelastic degeneration in elderly people or Barlow disease in young patients, diagnostic findings and tools mainly represented by echocardiography and Nuclear Magnetic Resonance, their specific application to newly developed transcatheter and minimally invasive treatments, indications, surgical management and interventional strategies. For all these big chapters special attention will be addressed to show temporal knowledge evolution and new elements acquisition since the central message is that MVP is in flux and far from full comprehension.
