The Run Results Viewer displays the results of your run session in a set of panes that you can show, hide, move, dock, and otherwise customize to your needs.

You can install the Run Results Viewer as a standalone installation. This enables you to share the results of your tests with business analysts and developers who do not work with QuickTest.

### **Help QuickTest Identify Your Objects as a Manual Tester Would – VISUALLY**

You can now use visual relation identifiers to identify application objects based on other objects that are always near them.

This enables you to create a more reliable identification definition for test objects that are otherwise difficult to differentiate, and to ensure that the identification remains reliable even if the user interface design changes.

The Visual Relation Identifier Dialog Box provides the interface and tools to help you create and verify your visual relation identifier definitions.

### **Collaborate with Developers to Pinpoint Defects Using Log Tracking**

In today's more agile development environment, it is more important than ever for QA engineers and developers to work together throughout the development and release process.

QuickTest's new **Log Tracking** functionality helps you work with developers to pinpoint the root causes of unexpected behavior in your application.

When you enable log tracking, QuickTest receives the Java or .NET log framework messages from your application and embeds them in the run results.

You can click a log message in the results to jump to the relevant step in the run results tree, or you can click a step in the run results tree and view the log message that was generated at the time that the selected step ran. You can also specify that a log message of a particular level (or higher) will fail your test.

After you view the results, you can print or export the log tracking details to a file to show to a developer, or you can provide the developer with the standalone Run Results Viewer installation so that the developer can view and analyze the results directly on his or her own desktop.

### **Out-of-the-Box Support for Web 2.0 Toolkit Applications**

QuickTest 11.00 provides Web Add-in Extensibility-based add-ins for ASP, .NET Ajax, GWT, Yahoo UI, and Dojo Web 2.0 toolkits.

You can use these add-ins just as you would any other add-in. You can also use Web Add-in Extensibility or Extensibility Accelerator to customize the provided support to match your needs.
