**Routledge Handbook of Smart Built Environment** Weisheng Lu,Chimay J. Anumba,2025-03-20 The primary aim of this edited volume is to document the current theories best practices and technological advancements in the move towards a Smart Built Environment SBE The needs to accelerate towards the SBE are numerous and include Increasing complexities and the need for interconnectivity within the built environment e g mega infrastructure projects Data driven

decision making resulting in higher demand from clients e.g. smart design, construction, operation and end of life (EOL). High requirements from stakeholders e.g. system efficiency, environmental performance, green procurement, fast paced technological advancement and integration, natural disaster resilience of the built environment e.g. prediction, smart control of building component sustainability issues around the built environment. In this book, the interrelationships among the various lifecycle stages: design, construction, operation and EOL, the collective benefit of synergy at building level, multi infrastructure level and city level as well as the ultimate goals in relation to the deployment of smart technologies in the industry are addressed. Part I covers smart design and construction, Part II smart living and operation and Part III broadens the scope to the whole smart city. Chapters examine how smart technologies can improve the effectiveness, productivity and efficiency of the built environment. An overview of theories and practices that are enabled by innovations and technologies for developing the SBE. The basis for new research agenda, new concepts and frameworks for future development. This handbook documents the current theories, practices and technologies and develops a holistic approach for research and practice by adopting a multidimensional outlook for the SBE. It is an essential reference work for all built environment stakeholders from academia through to the professions.

**Delivering Value with BIM** Adriana Sanchez, Keith Hampson, Simon Vaux, 2016-03-31. Building Information Modelling (BIM) is a global phenomenon which is gaining significant momentum across the world. Currently, there is little information on how to realise and monitor benefits from implementing BIM across the life cycle of a built environment asset. This book provides a practical and strategic framework to realise value from implementing BIM by adapting Benefit Realisation Management theory. It presents an approach for practitioners aiming to implement BIM across the life cycle of built environment assets including both buildings and infrastructure. Additionally, the book features wide ranging information about BIM, the challenges of monitoring progress towards benefit goals and the greater context of implementation, a set of dictionaries that illustrate how benefits can be achieved, what the benefit flows are and the enabling tools and processes that contribute to achieving and maximising them, a suite of measures that can serve to monitor progress with examples of how they have been used to measure benefits from BIM, real world examples from across the world and life

cycle phases that show how these benefits can be achieved and information on international maturity and competency measures to complement the value realisation framework Including a blend of academic and industry input this book has been developed in close collaborative consultation with industry government and international research organisations and could be used for industry courses on BIM benefits and implementation for asset management or by universities that teach BIM related courses

*Federal Register*, 2012-05 **Building Construction Methods and Systems** Ramazan Sarı, Ekrem Bahadır Çalışkan, 2024-03-01 The book presents practical information about the design and construction of building projects by addressing the principles of each method, unveiling background factors for requirements and state of the art application details. Science and technology provide thousands of construction materials, vast construction methods and various construction equipment and tools for realizing diverse architectural and engineering design projects. From market perspectives for new participants, the current construction practices are chaotic, having wide material and method options with globally available traders. On the other hand, within this global market, there is a growing awareness and need for practical information among society and new participants in the industry about general and globally available construction methods and technologies. Rather than focusing on materials available, construction methods and technologies were described in the book content concerning their classification systems. The subjects and topics are represented in a well-structured hierarchy supported by clear and narrative figures. The book presents general design and application principles of construction methods and technologies without diving into engineering calculations and formulas to keep the content easily understandable by all AEC practitioners and participants. Instead, state of the art construction applications were explained to unveil the logic and application requirements at the background of systems and methods. It also serves as a teaching tool for undergraduate students in architecture, engineering and construction.
