## **Range War Legacy:**

**Range War Legacy** Patricia Stinson, 2019-02-12 This book is about the cattle sheep wars of the 19th century in America. It is full of tension, a conflict between families and good against evil. It tells how the people lived and died hard. The author tells the story so well you can imagine yourself being there amid all the action. It is a story of courage, love, and loss, as well as the hatred that can brew between men.

**Range Wars** Ryan H. Edgington, 2014-07-01 Established in south central New Mexico at the end of World War II, White Sands Missile Range is the largest overland military reserve in the western hemisphere. It was the site of the first nuclear explosion, the birthplace of the American space program, and the primary site for testing U.S. missile capabilities. In this environmental history of White Sands Missile Range, Ryan H. Edgington traces the uneasy relationships between the military, the federal government, local ranchers, environmentalists, state game and fish personnel, biologists, and ecologists, state and federal political figures, hunters, and tourists after World War II as they all struggled to define and productively use the militarized western landscape. Environmentalists, ranchers, tourists, and other groups joined together to transform the meaning and uses of this region, challenging the authority of the national security state to dictate the environmental and cultural value of a rural American landscape. As a result, White Sands became a locus of competing geographies informed not only by the far-reaching intellectual, economic, and environmental changes wrought by the cold war but also by regional history, culture, and traditions.

**Risk Methodologies for Technological Legacies** Dennis Bley, Vitaly A. Eremenko, 2012-12-06 The Cold War Era left the major participants, the United States and the former Soviet Union (FSU), with large legacies in terms of both contamination and potential accidents. Facility contamination and environmental degradation, as well as the accident-vulnerable facilities and equipment, are a result of weapons development, testing, and production. Although the countries face similar issues from similar activities, important differences in waste management practices make the potential environmental and health risks of more immediate concern in the FSU and Eastern Europe. In the West, most nuclear and chemical waste is stored in known, contained locations, while in the East, much of the equivalent material is unconfined, contaminating the environment. In the past decade, the U.S. started to address and remediate these Cold War legacies. Costs have been very high, and the projected cost estimates for total cleanup are still increasing. Currently, in Russia, the resources for starting such major activities continue to be unavailable.
